

Light: Ray or wave?

How will we determine the nature of light?

Let's learn about the behaviour of waves and see if what we learn fits what we see!

**Claim:**

Light is a wave.

**Evidence:**

It behaves like another wave – the water wave: it diffracts, polarisation and refracts.

**Reasoning:**

Put in: We can experiment and test our hypothesis: does light behave like waves? Can what theory explain observed phenomena regarding light?

1. Describe the motivation for comparing water waves to light waves:

- If the light is a wave, any general rule we describe by studying what we know about water waves should be observable with light. This analogy gives us a practical test. If all waves do X and light does X, then we can deduce that light is a wave.

2. What is oscillation?

Oscillation is a fluctuation around a central point.

3. What is polarization?

Polarization is the ability of an external factor to block the wave's transmission.

4. What is diffraction?

When a wave travelling through its medium encounters a small passage – a slit.

5. What is interference?

When one wave "hits" another wave, "superposition" occurs. Waves can double their amplitude or cancel each other out depending on the momentary properties of the two waves that hit each other.

6. compare water waves to light waves

Experiment that demonstrates	Water Waves	Light Waves

Al-Amri, Mohamed El-Gomati, M. Suhail Zubairy, 2016-12-12 Light and light based technologies have played an important role in transforming our lives via scientific contributions spanned over thousands of years In this book we present a vast collection of articles on various aspects of light and its applications in the contemporary world at a popular or semi popular level These articles are written by the world authorities in their respective fields This is therefore a rare volume where the world experts have come together to present the developments in this most important field of science in an almost pedagogical manner This volume covers five aspects related to light The first presents two articles one on the history of the nature of light and the other on the scientific achievements of Ibn Haitham Alhazen who is broadly considered the father of

modern optics These are then followed by an article on ultrafast phenomena and the invisible world The third part includes papers on specific sources of light the discoveries of which have revolutionized optical technologies in our lifetime They discuss the nature and the characteristics of lasers Solid state lighting based on the Light Emitting Diode LED technology and finally modern electron optics and its relationship to the Muslim golden age in science The book s fourth part discusses various applications of optics and light in today s world including biophotonics art optical communication nanotechnology the eye as an optical instrument remote sensing and optics in medicine In turn the last part focuses on quantum optics a modern field that grew out of the interaction of light and matter Topics addressed include atom optics slow stored and stationary light optical tests of the foundation of physics quantum mechanical properties of light fields carrying orbital angular momentum quantum communication and Wave Particle dualism in action

### Optics The Study Of Light Answers Key Introduction

In this digital age, the convenience of accessing information at our fingertips has become a necessity. Whether its research papers, eBooks, or user manuals, PDF files have become the preferred format for sharing and reading documents. However, the cost associated with purchasing PDF files can sometimes be a barrier for many individuals and organizations.
