Social and Emotional Influences on Human Development: Perspectives From Developmental Neuroscience Nicola K. Ferdinand, Markus Paulus, Tobias Schuwerk, Nina Kühn-Popp, 2019-02-05 *The Sage Encyclopedia of Mood and Anxiety Disorders* Dara G.

Friedman-Wheeler, Amy Wenzel, 2024-10-24 Courses in psychological distress and disorders are among the most popular courses in psychology programs and mood and anxiety disorders are among the most prevalent disorders covered in these classes and encountered by mental health professionals. Although there are books on mood and anxiety disorders on particular aspects of them and on their presentation in specific populations, such works do not provide students new to the field with a comprehensive and accessible ready reference for understanding these disorders with respect to their phenomenology, etiology, and treatment, and through an inclusive lens that consistently considers how these symptoms appear and are construed across cultures, addressing societal factors such as race, culture, equity, and oppression. It is hoped that The SAGE Encyclopedia of Mood and Anxiety Disorders will fill this gap, allowing students and other interested readers to become familiar with past and current approaches and theories and to enhance their understanding of the sociocultural factors that affect how we discuss, approach, and treat these types of psychological distress. As such, consideration of sociocultural factors will infuse the three-volume set. The encyclopedia will consist of approximately 450 entries, essays arranged alphabetically within three volumes.

Scientific Research in Information Systems Jan Recker, 2021-10-21 This book introduces higher degree research students and early career academics to scientific research as occurring in the field of information systems and adjacent fields such as computer science, management science, organization science, and software engineering. Instead of focusing primarily on research methods as many other textbooks do, it covers the entire research process from start to finish, placing particular emphasis on understanding the cognitive and behavioural aspects of research, such as motivation, modes of inquiry, theorising, planning for research, planning for publication, and ethical challenges in research. Comprehensive but also succinct and compact, the book guides beginning researchers in their quest to do scholarly work and to assist them in developing their own answers and strategies over the course of their work. Jan Recker explains in this book the fundamental concepts that govern scientific research and then moves on to introduce the basic steps every researcher undertakes: choosing research questions, developing theory, building a research design, employing research methods, and finally writing academic papers. He also covers essentials of ethical conduct of scientific research. This second edition contains major updates on all these elements, plus significant expansions on relevant research methods such as design research and computational methods, a rewritten and extended chapter on theory development, and expansions to the chapters on research methods, scientific publishing, and research ethics. A companion website provides pedagogical materials and instructions for using this book in teaching.
