abstract When the concept of logarithms was first introduced to me a plethora of questions revolved around my mind My inquisitiveness compelled me to think and ask questions as to where are the practical applications of logarithms why do we take different bases of these functions and what is the need for natural logarithms Amongst these questions one particularly intrigued me why is e particularly the base of the natural logarithm Why out of all numbers that exist did we choose e as the base of the natural logarithm function I was fascinated by why taking the base e made the normal logarithm a natural logarithm Therefore to quench the curiosity of many others like me I will show through this paper that why e is the correct choice for the base of exponential and natural logarithm functions I shall also be exploring the most important property of e via this paper
