Chemistry Education and Contributions from History and Philosophy of Science Mansoor Niaz, 2015-12-23 This book explores the relationship between the content of chemistry education and the history and philosophy of science HPS framework that underlies such education It discusses the need to present an image that reflects how chemistry developed and progresses It proposes that chemistry should be taught the way it is practiced by chemists as a human enterprise at the interface of scientific practice and HPS Finally it sets out to convince teachers to go beyond the traditional classroom practice and explore new teaching strategies The importance of HPS has been recognized for the science curriculum since the middle of

the 20th century The need for teaching chemistry within a historical context is not difficult to understand as HPS is not far below the surface in any science classroom A review of the literature shows that the traditional chemistry classroom curricula and textbooks while dealing with concepts such as law theory model explanation hypothesis observation evidence and idealization generally ignore elements of the history and philosophy of science This book proposes that the conceptual understanding of chemistry requires knowledge and understanding of the history and philosophy of science Professor Niaz's book is most welcome coming at a time when there is an urgently felt need to upgrade the teaching of science The book is a huge aid for adding to the usual way presenting science as a series of mere facts also the necessary mandate to show how science is done and how science through its history and philosophy is part of the cultural development of humanity Gerald Holton Mallinckrodt Professor of Physics these are valence bond VB and molecular orbital MO theories He emphasizes the importance of having rival theories and interpretations in science and its advancement He further argues that this VB MO rivalry is still alive and together the two conceptual frames serve as the tool kit for thinking and doing chemistry in creative manners The author surveys chemistry textbooks in the light of the how the books preserve or not the balance between the two theories in describing various chemical phenomena This Talmudic approach of conceptual tension is a universal characteristic of any branch of evolving wisdom As such Mansoor's book would be of great utility for chemistry teachers to examine how can they become more effective teachers by recognizing the importance of conceptual tension Sason Shaik Saeree K and Louis P Fiedler Chair in Chemistry Director The Lise Meitner Minerva Center for Computational Quantum Chemistry The Hebrew University of Jerusalem ISRAEL

**Chemical Cosmology** Jan C. A. Boeyens, 2010-09-02 The composition of the most remote objects brought into view by the Hubble telescope can no longer be reconciled with the nucleogenesis of standard cosmology and the alternative explanation in terms

of the Cold Dark Matter model has no recognizable chemical basis A more rational scheme based on the chemistry and periodicity of atomic matter opens up an exciting new interpretation of the cosmos in terms of projective geometry and general relativity The response of atomic structure to environmental pressure predicts non Doppler cosmical redshifts and equilibrium nucleogenesis by particle addition in accord with observed periodic variation of nuclear abundance Inferred cosmic self similarity elucidates the Bode Titius law general commensurability in the solar system and the occurrence of quantum phenomena on a cosmic scale The generalized periodic function involves both matter and anti matter in an involuted mapping to a closed projective plane This topology ensures the same symmetrical balance in a chiral universe wrapped around an achiral vacuum interface without singularities A new cosmology emerges based on the theory of projective relativity presented here as a translation of Veblen's original German text Not only does it provide a unification of gravity electromagnetism and quantum theory through gauge invariance but also supports the solution of the gravitational field equations obtained by G del for a rotating universe The appearance of an Einstein Rosen bridge as outlet from a black hole into conjugate anti space accounts for globular clusters quasars cosmic radiation ray bursters pulsars radio sources and other regions of plasma activity The effects of a multiply connected space time manifold on observations in an Euclidean tangent space are unpredictable and a complete reassessment of the size and structure of the universe is indicated The target readership includes scientists as well as non scientists everybody with a scientific or philosophical interest in cosmology and especially those cosmologists and mathematicians with the ability to recast the crude ideas presented here into appropriate mathematical models
