Handbook of Immunohistochemistry and in Situ Hybridization of Human Carcinomas M. A. Hayat, 2005-01-31
Immunohistochemistry is the use of specific antibodies to stain particular molecular species in situ. This technique has allowed the identification of many more cell types than could be visualized by classical histology, particularly in the immune system and among the scattered hormone-secreting cells of the endocrine system, and has the potential to improve diagnosis, prognosis, and therapeutic options of cancer. *Handbook of Immunohistochemistry and in Situ Hybridization of Human Carcinomas* discusses all aspects of immunohistochemistry and in situ hybridization technologies and the important role they play in reaching a cancer diagnosis. It provides step-by-step instructions on the methods of additional molecular technologies such as DNA microarrays and microdissection, along with the benefits and limitations of each method. The topics of region-specific gene expression, its role in cancer development, and the techniques that assist in the understanding of the molecular basis of disease are relevant and necessary in science today. This book is the second volume of three planned individually sold volumes on this topic. Like Volume 1, this book fully explains the principles and applications of modern techniques used in the field of molecular genetics. It will be of particular interest to pathologists and molecular pathologists conducting both academic and/or clinical research. The only book available that translates molecular genetics into cancer diagnosis. The results of each immunohistochemical and in situ hybridization method are presented in the form of color illustrations. Methods discussed were either developed or refined by expert contributors in their own laboratories. **Manual of Industrial Microbiology and Biotechnology** Arnold L. Demain, Julian E. Davies, Ronald M. Atlas, 1999. The editors have enlisted a broad range of experts including microbial ecologists, physiologists, geneticists, biochemists, molecular biologists, and biochemical engineers who offer practical experience not found in texts and journals. This comprehensive perspective makes MIMB a valuable resource, the structure of which resembles the sequence of operation involved in the development of a commercial biological process and product. **Crime Laboratory Digest**, 1997. *Functional Genomics* Stephen P. Hunt, Frederick Livesey, 2000. With the complete genomes of many organisms now available and the first draft of the human genome imminent, there is an increasing demand from researchers in a range of disciplines for techniques that will allow them to utilize these resources in their own research. This book provides a comprehensive treatment of the range of methods available for gene and protein expression profiling in a variety of systems. These include large-scale methods such as cDNA microarrays, serial analysis of gene expression (SAGE), and proteomics, and also methods suitable for non-specialist laboratories such as differential display and suppression subtraction hybridization. In all cases, the chapters have been written by the developers of these methods or experienced users and include detailed protocols to facilitate the introduction of these methods to the readers' laboratories. [Proceedings of the National Academy of Sciences of the United States of America](#) National Academy of Sciences (U.S.), 1997-11. **cDNA Preparation and Characterization** Sherman M.

Weissman,1999-05-17 Knowledge of mRNA structure genomic location and patterns of expression must be converted into information regarding the function of the encoded proteins Each gene can be the subject of years of intensive study Nevertheless a number of methods are being developed that use cDNA to predict properties or permit the selective isolation of cDNAs encoding proteins with certain general properties such as subcellular location The technology in this field is rapidly evolving and these contributions represent a snapshot in time of the number of currently available and useful approaches to the problems referred to above
