Human Performance on the Flight Deck Don Harris, 2016-12-05 Taking an integrated systems approach to dealing exclusively with the human performance issues encountered on the flight deck of the modern airliner this book describes the inter relationships between the various application areas of human factors recognising that the human contribution to the operation of an airliner does not fall into neat pigeonholes The relationship between areas such as pilot selection training flight deck design and safety management is continually emphasised within the book It also affirms the upside of human factors in aviation the positive contribution that it can make to the industry and avoids placing undue emphasis on when the human component fails The book is divided into four main parts Part one describes the underpinning science base with chapters on human information processing workload situation awareness decision making error and individual differences Part two of the book looks at the human in the system containing chapters on pilot selection simulation and training stress fatigue and alcohol and environmental stressors Part three takes a closer look at the machine the aircraft beginning with an examination of flight deck display design followed by chapters on aircraft control flight deck automation and HCI on the flight deck Part four completes the volume with a consideration of safety management issues both on the flight deck and across the airline the final chapter in this section looks at human factors for incident and accident investigation The book is written for professionals within the aviation industry both on the flight deck and elsewhere for post graduate students and for researchers working in the area

Improving Aviation Performance through Applying Engineering Psychology Michael A. Vidulich, Pamela S.

Tsang, 2019-02-11 Aviation remains one of the most active and challenging domains for human factors and applied psychology. Since 1981 the biennial International Symposium on Aviation Psychology (ISAP) has convened for the purposes of a) presenting the latest research on human performance problems and opportunities within aviation systems, b) envisioning design solutions that best utilize human capabilities for creating safe and efficient aviation systems, and c) the bringing together of scientists, research sponsors, and operators in an effort to bridge the gap between research and application. Based upon the potential impact of emerging trends, current debates, or enduring issues presented at the 19th ISAP, select authors were invited to expand on their work following the benefit of interactions at the symposium. The authors include leading scientists, prominent researchers, and aviation operators contributing to the discussion of the most pressing technical challenges and research priorities. Visions for the incorporation of new interface technologies within next generation cockpits, tools for future air traffic control, research neuroergonomic findings in aviation settings, and human limitations affecting safety are offered. The aim of these volumes is to report the latest findings in aviation psychology and to suggest new directions for advancing the field.

FEATURES Bridges the gap between aviation psychology research and real world challenges. Includes work of the distinguished researchers and seasoned practitioners with select contributions reflecting significant developments in aviation psychology. Reports on the latest findings in aviation psychology and suggests new directions for advancing the field. Contains work on perceptual and cognitive influences on performance, the impact of advanced modeling techniques, and the potential of neuroergonomics.
