Overview of the Skeleton: Classification and Structure of Bones and Cartilages

Name karen ortegoni Lab Time/Date july 29

Cartilages of the Skeleton

1. Using the key choices, identify each type of cartilage described (in terms of its body location or function) below.

Key: a. elastic

b. fibrocartilage

c. hyaline

elastic

1. supports the external ear

fibrocartilage

6. meniscus in a knee joint

fibrocartilage

2. between the vertebrae

hyaline

7. connects the ribs to the sternum

elastic

3. forms the walls of the voice box (larynx)

fibrocartilage

8. most effective at resisting compression

elastic

4. the epiglottis

elastic

9. most springy and flexible

hyaline

5. articular cartilages

hyaline

10. most abundant

Classification of Bones

2. The four major anatomical classification of bones are long, short, flat, and irregular. Which category has the least amount of spongy bone relative to its total volume? long bones

3. Classify each of the bones in the chart below as either long, short, flat, or irregular by placing a check mark in the appropriate column. Also use a check mark to indicate whether the bone is a part of the axial or the appendicular skeleton. Use Figure 8.1 as a guide.

HUMAN SKELETAL ANATOMY Scott I. Fairgrieve, Tracy S. Oost, 2001-01-01

The Human Skeletal Anatomy Laboratory Manual and Workbook has been designed to help students who are enrolled in courses dedicated to this topic. It is the product of many years of designing and instructing a Human Skeletal Biology course for undergraduate students. The key to this manual is flexibility. Instructors may utilize as much or as little of the manual as they see fit. It is largely based on the regional approach to anatomy. However, the first section of the manual begins with a survey of the microscopic and macroscopic structure of bone. After grounding the student in the basics of bone structure, the manual then turns to the gross morphological anatomy of skeletal elements. The axial skeleton is dealt with first, then the appendicular skeleton. The manual is designed to cover material in an incremental fashion. Specifically, the anatomy of less complicated bones such as the ribs, sternum, and hyoid are discussed prior to other axial bones in order to acquaint students with how to handle real bone material in the laboratory. Each successive laboratory session demands more from the student in both the level of understanding and expectations in assigned laboratory exercises. Each laboratory session begins with an introduction in order to familiarize the student with the areas to be studied. Subsequently, the laboratory session has a stated purpose with clear instructions of expectations and learning objectives. Important Terms are clearly indicated in boxes to stress to students that these must be understood. This is then followed by a clear laboratory Procedure for the student to follow. This usually involves the identification of particular features of assigning specific tasks as identified in the various Exercises. Finally, as a means of stressing the applicability of what has been learned in the laboratory exercise, the student will be requested to generate an evaluation of some aspect of the anatomy such as using a method for determining age at death from assigned specimens. The student is then required to interpret this information and produce for the next class or session a Laboratory Research Report. Guidelines for these reports are contained within this manual. Diagrams, photographs have been provided for students to label. These diagrams are meant to be a study guide. Instructors may wish to add anatomical features or de-emphasize certain features accordingly.
