Transport for Suburbia Paul Mees,2009-12 The need for effective public transport is greater than ever in the 21st century With countries like China and India moving towards mass automobility we face the prospects of an environmental and urban health disaster unless alternatives are found It is time to move beyond the automobile age But while public transport has worked well in the dense cores of some big cities the problem is that most residents of developed countries now live in dispersed suburbs and smaller cities and towns These places usually have little or no public transport and most transport commentators have given up on the task of changing this it all seems too hard This book argues that the secret of European style public transport lies in a generalizable model of network planning that has worked in places as diverse as rural Switzerland the Brazilian city of Curitiba and the Canadian cities of Toronto and Vancouver It shows how this model can be adapted to suburban exurban and even rural areas to provide a genuine alternative to the car and outlines the governance funding and service planning policies that underpin the success of the world s best public transport systems Back cover **Transport Terminals and Modal Interchanges** Christopher Blow,2012-05-23 This is the first book to review a trend in transport systems which has only recently come of age the multi modal interchange Separate modes of transport are being linked through joined up thinking and transport designers and authorities are only now able to exploit interchange opportunities This book presents examples of how these new opportunities have been planned and designed and outlines how transfer and mobility can be improved in the future Blow takes the airport as the focal point of true multi modal passenger terminals and presents the development of these buildings as representing a new experience in travel The book shows that the success of the experience of transferring from one mode of transport to another depends on the many factors including congestion in an already overloaded system and the way that designers and managers have addressed contingency planning International examples are drawn from areas where mobility is most concentrated and the demands on design are at their highest The book also addresses important issues of rebuilding and redevelopment where once separate modes of transport are being linked to each other and where short term inconveniences rectify past wrongs in the long term It is a compendium of architectural and engineering achievement **Keep a City Moving** Liang-Huew Wang,Anthony G. O. Yeh,1993
