

Placenta Previa

Maternity

Pathophysiology

This is the **abnormal implantation** of the placenta over the cervix either completely or partially at the bottom of the uterus. As you know, the cervix is the door to the baby condo which is now blocked by the placenta, making a normal vaginal delivery impossible.

As pregnancy progresses, the placenta grows in size & can migrate away from the cervical opening. This means it may resolve on its own by the 3rd trimester.

Therefore, additional ultrasounds are typically performed closer to the time of delivery - around 36 weeks to reassess placental location.
