## Algebra Tiles

Algebra tiles provide a way to model constant, linear, and quadratic expressions. Three types of tiles represent the parts of an expression based on the concept of area. Recall that the area of a rectangle is found by multiplying the length by the width. The basic representations are explained in the table.

Tile Name	Tile Appearance	Tile Representation
1 tile		A small square tile represents the constant value of 1. The length and width of the square are each 1 unit, which yields an area of 1 square unit ( $1 \times 1 = 1$ ).
$x$ tile		A rectangular tile represents the variable $x$ . The length is $x$ units and the width is 1 unit, which yields an area of $x$ square units ( $x \times 1 = x$ ).
