Design of FRP and Steel Plated RC

Structures Deric Oehlers,Rudolph Seracino,2004-09-11 There are a large and ever increasing number of structures and buildings worldwide that are in need of refurbishment rehabilitation and strengthening The retrofitting of beams and slabs for this purpose is now recognized as the most cost effective and environmentally sustainable method of carrying out this essential renovation work The authors of Design of FRP and Steel Plated RC Structures are both acknowledged world experts on these techniques and their book has been designed to provide the reader with a comprehensive overview of the established techniques and their applications as well as thorough coverage of newly emerging methodologies and their uses The comparison of FRP and steel is a particular focus and the authors provide practical examples of where one material might be used in preference to another Indeed practical worked examples of how when and why specific solutions have been chosen in real world situations are used throughout the text and provide the user with invaluable insights into the decision making process and its technical background Just as importantly these examples make the understanding and application of these techniques easier to understand for the student and the practitioner The book is international in appeal as while no reference is made to specific local codes the authors approach always follows that of the more advanced structural codes worldwide As such it will remain an essential resource for many years to come Design of FRP and Steel Plated RC Structures is an important reference for a broad range of researchers students and practitioners including civil engineers and contractors architects designers and builders Contains detailed worked examples throughout to aid understanding and provide technical insight Covers all types of metal plates and all types of FRP plates Uses design philosophies that can be used with any mathematical model Provides coverage of all main international guidelines Rolling Mills, Drawing Machines and Metal Finishing Equipment ,1983 *Ultimate Limit State Design of Steel-Plated Structures* Jeom Kee Paik,Anil Kumar Thayamballi,2003-03-28 Steel plated structures are important in a variety of marine and land based applications including ships offshore platforms power and chemical plants box girder bridges and box girder cranes The basic strength members in steel plated structures include support members such as stiffeners and plate girders plates stiffened panels grillages and box girders During their lifetime the structures constructed using these members are subjected to various types of loading which is for the most part operational but may in some cases be extreme or even accidental Ultimate Limit State Design of Steel Plated Structures reviews and describes both fundamentals and practical design procedures in this field The derivation of the basic mathematical expressions is presented together with a thorough discussion of the assumptions and the validity of the underlying expressions and solution methods Particularly valuable coverage in the book includes Serviceability and the ultimate limit state design of steel structural systems and their components The progressive collapse and the design of damage tolerant structures in the context of marine accidents Age

related structural degradation such as corrosion and fatigue cracks Furthermore this book is also an easily accessed design tool which facilitates learning by applying the concepts of the limit states for practice using a set of computer programs which can be downloaded In addition expert guidance on mechanical model test results as well as nonlinear finite element solutions sophisticated design methodologies useful for practitioners in industries or research institutions selected methods for accurate and efficient analyses of nonlinear behavior of steel plated structures both up to and after the ultimate strength is reached is provided Designed as both a textbook and a handy reference the book is well suited to teachers and university students who are approaching the limit state design technology of steel plated structures for the first time The book also meets the needs of structural designers or researchers who are involved in civil marine and mechanical engineering as well as offshore engineering and naval architecture U.S. Government Research Reports ,1962-07 **Business**
