

The background of the cover is a detailed painting of a tropical scene. On the left, a large, vibrant red flower with many petals and a central cluster of stamens is in bloom. Below it, a green leaf with a prominent vein pattern is visible. In the center, a small hummingbird with a white belly and a blue head is perched on a thin branch. To its right, another hummingbird is shown in flight, its wings spread. The background is filled with various green plants and foliage, creating a lush, natural environment.

**Ecology** Robert E. Ricklefs, 1973      Ecology Robert Eric Ricklefs, 1979      *Evolutionary Gerontology and Geriatrics* Giacinto Libertini, Graziamaria Corbi, Valeria Conti, Olga Shubernetskaya, Nicola Ferrara, 2021-05-25 This book provides concrete scientific basis that we can conceive the possibility of modifying or even completely canceling aging process despite the fact that aging is commonly regarded as the result of the overall effects of many uncontrollable degenerative phenomena. The authors illustrate in detail the mechanisms by which cells and the whole organism age. Actions by which it is possible or will be possible within a limited time to operate for modifying aging are also debated. The discussion is conducted within the frame and the concepts of evolutionary medicine which is also indispensable for distinguishing between the manifestations of aging and i diseases that worsen with age and ii acceleration of normal aging rates caused by unhealthy lifestyle habits and other avoidable factors. The book also discusses the impact of aging on overall mortality and the strange situation that according to official statistics aging does not exist as cause of death. This book is a turning point between a gerontology and geriatrics conceived as the study and vain treatment of an incurable condition and one in which these disciplines examine the how and why of a physiological phenomenon that can be modified up to a possible total control. This means transforming the medical prevention and treatment of physiological aging from the greatest failure to the greatest success of medicine.

**Tropical Rainforests** Eldredge Bermingham, Christopher W. Dick, Craig Moritz, 2005-08 Synthesizing theoretical empirical analyses of the processes that help shape these unique ecosystems *Tropical Rainforests* looks at the effects of evolutionary histories past climate change ecological dynamics on the origin maintenance of tropical rainforest communities.

**Conservation Biology of Hawaiian Forest Birds** Thane K. Pratt, Carter T. Atkinson, Paul C. Banko, Bethany L. Woodworth, James D. Jacobi, 2009-01-01 Hawaii's forest bird community is the most insular and most endangered in the world and serves as a case study for threatened species globally. Ten have disappeared in the past thirty years, nine are critically endangered, and even common species are currently in decline. Thane K. Pratt, his coeditors, and collaborators, all leaders in their field, describe the research and conservation efforts over the past thirty years to save Hawaii's forest birds. They also offer the most comprehensive look at the reasons for these extinctions and attempts to overcome them in the future. Among the topics covered in this book are trends in bird populations, environmental and genetic factors limiting population size, avian diseases, predators, and competing alien bird species. Color plates by award-winning local photographer Jack Jeffrey illustrate all living species discussed or described.

**Energy Workbook for Parks** Lee Stephenson, Nancy Strader, 1979

**Ecological Morphology** Peter C. Wainwright, Stephen M. Reilly, 1994-08-15 Ecological morphology examines the relation between an animal's anatomy and physiology, its form and function, and how the animal has evolved in and can inhabit a particular environment. Within the past few years, research in this relatively new area has exploded. Ecological Morphology is a synthesis of major concepts and a demonstration of the ways in which this integrative approach can yield

rich and surprising results Through this interdisciplinary study scientists have been able to understand for instance how bat wing design affects habitat use and bat diet how the size of a predator affects its ability to capture and eat certain prey and how certain mosquitoes have evolved physiologically and morphologically to tolerate salt water habitats Ecological Morphology also covers the history of the field the role of the comparative method in studying adaptation and the use of data from modern organisms for understanding the ecology of fossil communities This book provides an overview of the achievements and potential of ecological morphology for all biologists and students interested in the way animal design ecology and evolution interact

**Current Ornithology** D.M. Power, 2013-06-29 In this volume I include chapters on continental population trends ornithology's contribution to the habitat concept social organization outside the breeding season the role of predation in limiting numbers and the evolution of prolonged incubation periods Authors are based in Belgium the United Kingdom and the United States Is there evidence for wholesale population declines in North American birds Robert Askins says yes with qualifications Fragmentation of forest causes the population of many forest interior species to decline and loss of winter forest habitat in Mexico Central America and the Greater Antilles is potentially serious Trends over the past 25 years are however difficult to discern Grassland and shrubland specialists have likewise diminished over the past quarter century Askins calls for management of regional landscapes to maintain habitat diversity As for habitats William Block and Leonard Brennan review the role of ornithology in developing the concept of habitat Their intention is to stimulate ornithologists to consider habitat as a unifying concept in contemporary ecology They describe uses of the habitat concept in basic and experimental ecology Recent advances in sociobiology stimulated deeper interest in social organization Erik Matthysen has gathered a diversity of information on social organization outside the breeding season both in migratory and in nonbreeding resident birds He discusses populations that continue individual associations outside the breeding season and site related aggression territoriality and reviews a number of long term benefits of these behaviors

**Avian Biology** Donald S. Farner, James R. King, Kenneth C. Parkes, 2012-12-02 Written by international experts from many disciplines this multi volume treatise is a comprehensive survey of the established data and principles of avian biology The volumes thoroughly review knowledge of the 8600 living species of birds knowledge resulting from advances in instrumentation and technology and improved transportation facilities that permit more detailed far ranging field studies than ever before The emphasis is on the significance of avian biological research to such areas of biology as ethology ecology population biology evolutionary biology and physiological ecology

**Toward an Anthropology of Graphing** W.M. Roth, 2012-12-06 This volume presents the results of several studies involving scientists and technicians The author describes and analyses the interpretation scientists volunteered given graphs that had been culled from an introductory course and textbook in ecology He next reports on graph usage in three different workplaces based on his ethnographic research among scientists and technicians

**Avian Energetics and Nutritional Ecology** C. Carey, 2012-12-06 A symposium held in 1973 chaired and

organized by William R Dawson was the first major attempt to summarize and synthesize the existing information in the then emerging field of avian energetics. The symposium featured papers by James R King, William A Calder III, Vance A Tucker and Robert E Ricklefs and commentaries by George A Bartholomew, S Charles Kendeigh and Eugene P Odum. The proceedings of the symposium, *Avian Energetics* (Paynter 1974), played a critical role in stimulating interest and research in the field of avian energetics. Some twenty odd years later we are making another attempt to summarize the information in the field of avian energetics. Some obvious differences exist between its predecessor and this volume. Numerous improvements in methodology such as the use of doubly labeled water to estimate metabolism in free living birds now allow researchers to ask questions that could not be addressed previously. Second consideration of nutrition is now inseparable from that of energetics. This merger is necessary not only because food intake is the source of both energy and nutrients but also because one or more nutrients rather than energy can be limiting for a given species in a particular instance. Finally, the study of energetics and nutritional ecology particularly in birds and mammals has grown so dramatically that a single volume can now only partially cover the range of possible topics and can catalogue only a sampling of all the studies on the subject.

Current Ornithology Richard Johnston, 2013-11-11. The appearance of the first volume of a projected series is the occasion for comment on scope, aims and genesis of the work. The scope of *Current Ornithology* is all of the biology of birds. Ornithology as a whole organism science is concerned with birds at every level of biological organization from the molecular to the community at least from the Jurassic to the present time and over every scholarly discipline in which bird biology is done. To say this is merely to expand a dictionary definition of ornithology. The aim of the work to be realized over several volumes is to present reviews or position statements concerning the active fields of ornithological research. The reviews will be relatively short and often will be done from the viewpoint of a readily identified group or school. Such a work could have come into being at any time within the past fifty years but that *Current Ornithology* appears now is a result of events that are only seven to eight years old. One important event was the initiation in 1975-1976 of the Workshop on a National Plan for Ornithology under the directorship of James R King and Walter J Bock, cosponsored by the American Ornithologists Union and the National Science Foundation. Part of the Workshop's interests lay in publications, resources and certain kinds of information on publications were obtained by means of a questionnaire.

**Birds of Two Worlds** Russell Greenberg, Peter P. Marra, 2005-05-02. For centuries biologists have tried to understand the underpinnings of avian migration: where birds go and why, why some migrate and some do not, how they adapt to a changing environment and how migratory systems evolve. Twenty five years ago the answers to many of these questions were addressed by a collection of migration experts in Keast and Morton's classic work *Migrant Birds in the Neotropics*. In 1992 Hagan and Johnston published a follow up book *Ecology and Conservation of Neotropical Migrant Landbirds*. In *Birds of Two Worlds* Russell Greenberg and Peter Marra bring together the world's experts on avian migration to discuss its ecology and evolution. The contributors move the discussion of

migration to a global stage looking at all avian migration systems and delving deeper into the evolutionary foundations of migratory behavior Readers interested in the biology behavior ecology and evolution of birds have waited a decade to see a worthy successor to the earlier classics *Birds of Two Worlds* will complete the trilogy and become indispensable for ornithologists evolutionary biologists serious birders and public and academic libraries National Union Catalog ,1978 Includes entries for maps and atlases **Wildlife Abstracts** U.S. Fish and Wildlife Service,1976 **Fisheries Review** ,1995 *Tropical Forest Community Ecology* Walter Carson,Stefan Schnitzer,2011-08-31 Historically tropical ecology has been a science often content with descriptive and demographic approaches which is understandable given the difficulty of studying these ecosystems and the need for basic demographic information Nonetheless over the last several years tropical ecologists have begun to test more sophisticated ecological theory and are now beginning to address a broad array of questions that are of particular importance to tropical systems and ecology in general Why are there are so many species in tropical forests and what mechanisms are responsible for the maintenance of that vast species diversity What factors control species coexistence Are there common patterns of species abundance and distribution across broad geographic scales What is the role of trophic interactions in these complex ecosystems How can these fragile ecosystems be conserved Containing contributions from some of the world s leading tropical ecologists *Tropical Forest Community Ecology* provides a summary of the key issues in the discipline of tropical ecology Includes contributions from some of the world s leading tropical ecologists Covers patterns of species distribution the maintenance of species diversity the community ecology of tropical animals forest regeneration and conservation of tropical ecosystems Emerging Avian Disease Ellen Paul,2012-05-02 This volume of *Studies in Avian Biology* resulted from a Symposium on Avian Disease at the North American Ornithological Conference held in Veracruz Mexico in October 2006 The diverse set of topics addressed in the contributed chapters include the evolutionary and ecological aspects of the host vector systems of avian infectious disease effects of genetic variation introduction success and vector ecology evolution of resistance and virulence of pathogens and effects of changing geographic distributions In addition to empirical studies under field conditions the authors have developed predictive models to assess the movement and potential impact of these diseases Other chapters delve into the potential impacts of pathogens on ornithological research and the key role of ornithological science in biosurveillance and documenting impacts of disease on bird populations Provided by publisher **Theological Foundations for Environmental Ethics** Jame Schaefer,2009 This book asks whether religion can make a positive contribution to preventing further destruction of biological diversity and ecosystems and threats to our earth The author reconstructs the teachings of Augustine Thomas Aquinas and other classic thinkers to reflect our current scientific understanding of the world **Ecology Revisited** Astrid Schwarz,Kurt Jax,2011-03-18 As concerns about humankind s relationship with the environment move inexorably up the agenda this volume tells the story of the history of the concept of ecology itself and adds much to the historical and philosophical debate over this multifaceted

discipline The text provides readers with an overview of the theoretical institutional and historical formation of ecological knowledge The varied local conditions of early ecology are considered in detail while epistemological problems that lie on the borders of ecology such as disunity and complexity are discussed The book traces the various phases of the history of the concept of ecology itself from its 19th century origins and antecedents through the emergence of the environmental movement in the later 20th century to the future and how ecology might be located in the environmental science framework of the 21st century The study of ecological phenomena has never been confined solely to the work of researchers who consider themselves ecologists It is rather a field of knowledge in which a plurality of practices concepts and theories are developed Thus there exist numerous disciplinary subdivisions and research programmes within the field the boundaries of which remain blurred As a consequence the deliberation to adequately identify the ecological field of knowledge its epistemic and institutional setting is still going on This will be of central importance not only in locating ecology in the frame of 21st century environmental sciences but also for a better understanding of how nature and culture are intertwined in debates about pressing problems such as climate change the protection of species diversity or the management of renewable resources
