

Single Example

Single 16-FX Pedals, One Amplifier

This example illustrates a simple configuration for connecting your amp and pedals. Four pedals are connected to the Audio Loop 1 through 4, and the output of the rack is connected to the amplifier's input jack. The function switch button will control the amp's channel and other features directly with foot, etc.

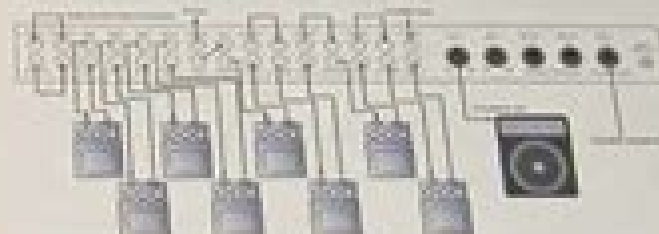

Single 16-FX Pedals, Two Amps

This is a two-amp configuration - you can have either amp on, both amps on, or both amps off. When Audio Loop 1 is on, Amp 1 is active and when Audio Loop 2 is on, Amp 2 is active. The amp that is not active will have its input muted. Both amplifier switching can be used. The amp can be switched simultaneously or independently, depending on the amplifier and amplifier interface cables being used. In a configuration like this, an isolation transformer may be needed to eliminate noise caused by ground loops.

Single 16-FX Pedals, One Amplifier

In this configuration, all of the audio loops are connected to either no output or different pedals. The output of the rack is connected to the input of the amp, and the "Amp In" jack is connected to the input of the amp.

Single 16-FX Pedals, Two Amps

This example shows how you can use the RG-16 in a system where there are effects connected to the amp's input and output in the amp's effects loop. The output of the first amp is connected to the amp's input, and Amp 1 and 2 are connected to the amp's effects loop. The RG-16 is used to pass the signal to the amp's effect units, allowing you to control the entire rig.
