Tool Use In Animals Cognition And Ecology:

Tool Use in Animals Crickette Marie Sanz,Josep Call,Christophe Boesch,2013 The last decade has witnessed remarkable discoveries and advances in our understanding of the tool using behaviour of animals Wild populations of capuchin monkeys have been observed to crack open nuts with stone tools similar to the skills of chimpanzees and humans Corvids have been observed to use and make tools that rival in complexity the behaviours exhibited by the great apes Excavations of the nut cracking sites of chimpanzees have been dated to around 4 5 thousand years ago Tool Use in Animals collates these and many more contributions by leading scholars in psychology biology and anthropology along with supplementary online materials into a comprehensive assessment of the cognitive abilities and environmental forces shaping these behaviours in taxa as distantly related as primates and corvids

The Routledge International Handbook of Comparative Psychology Todd M. Freeberg,Amanda R. Ridley,Patrizia d'Ettorre,2022-08-31 The Routledge International Handbook of Comparative Psychology is an international reference work that offers scientists and students a balanced overview of current research in the field of comparative psychology and animal behavior The book takes an integrative approach to animal behavior with most of the chapters discussing research involving both proximate developmental and mechanistic and ultimate functional and phylogenetic levels of analysis Chapters cover the major ideas of core topics in the field and examine emerging research trends to provide readers deeper understanding of these ideas One of the strengths of this book is its the coverage of core topics in comparative psychology and animal behavior from different and diverse perspectives The diverse perspectives come from the wide range of focal species studied by chapter authors a range traditionally quite atypical for comparative psychology and from the widespread international representation of the authors and the diversity of departments and research centers at which these authors work in The first part of the Handbook

examines historical and foundational principles and theories in the field The second part focuses on individual behavior systems The final part of the book is devoted to a diversity of ideas that extend our understanding of behavior into new directions The Routledge International Handbook of Comparative Psychology is an essential resource for advanced undergraduate and graduate students postdoctoral researchers and established academics as well as others who are interested in comparative psychology and animal behavior

Animal Creativity and Innovation, 2015-10-29 Animal Creativity and Innovation explores theories and research on animal innovation and creativity comparing and contrasting it with theory and research on human creativity and innovation In doing so it encompasses findings from psychology biology neuroscience engineering business ecology and education The book includes examples of animal innovation in parrots dogs marine mammals insects and primates exploring parallels from creative play in children The book defines creativity differentiating it from play and looks at evolutionary models and neurological constructs The book further explores applied aspects of animal innovation and creativity including tool use and group dynamics as well as barriers to creativity The final chapters look into how creative behavior may be taught or trained Each chapter is followed by a commentary for integration of thoughts and ideas between animal and human research behavioral and cognitive research and theory and observation in real life Compares theory and research on animal and human creativity Defines and differentiates creativity from play Reviews applied creativity in tool use and social dynamics Includes examples of animal creativity in multiple species

Animal Tool Behavior Robert W. Shumaker, Kristina R. Walkup, Benjamin B. Beck, 2024-12-10 This third edition is the essential gold use standard reference of how animals use and manufacture tools with a decade of new findings

The Palgrave Handbook on the Problem of Animal Suffering in the Philosophy of Religion B. Kyle Keltz, 2025-07-28 Atheists argue that animal pain disease suffering and death cause a problem for theism because they believe that an all knowing all powerful and all good God would not use millions of years of animal suffering just to make a world suitable for humans Animal suffering was not a concern for theism through the medieval period but it has been increasingly discussed in philosophy of religion since modern times and there is especially a large and growing amount of literature on this subject that has been published in the last few decades This handbook serves as a guide for those interested in the literature on the problem by bringing together experts in the philosophy of religion theology environmental ethics and the philosophy of animal minds It not only presents major formulations of the problem of animal suffering and major theodicies but it also discusses metaethical issues regarding animal suffering the question of animal consciousness and self awareness and their implications for animal suffering and what implications available theodicies might have for animal ethics

Adaptation and the Brain Susan D. Healy, 2021 What role has natural selection played in shaping the structure and function of the vertebrate brain This accessible book unravels the myriad adaptive explanations that have built up over decades providing both a review and a critique of the work that has sought to explain which natural selection pressures have led to changes in brain size

The Routledge Handbook of Philosophy of Animal Minds Kristin Andrews, Jacob Beck, 2017-07-06 While philosophers have been interested in animals since ancient times in the last few decades the subject of animal minds has emerged as a major topic in philosophy The Routledge Handbook of Philosophy of Animal Minds is an outstanding reference source to the key topics problems and debates in this exciting subject and is the first collection of its kind Comprising nearly fifty chapters by a team of international contributors the Handbook is divided into eight parts Mental representation Reasoning and metacognition Consciousness Mindreading Communication Social cognition and culture Association simplicity and modeling Ethics Within these sections central issues debates and problems are examined including whether and how animals represent and reason about the world how animal cognition differs from human cognition whether animals are conscious whether animals represent their own mental states or those of others how animals communicate the extent to which animals have cultures how to choose among competing models and explanations of animal behavior and whether animals are moral agents and or moral patients The Routledge Handbook of Philosophy of Animal Minds is essential reading for students and researchers in philosophy of mind philosophy of psychology ethics and related disciplines such as ethology biology psychology linguistics and anthropology

The Chimpanzees of the Taï Forest Christophe Boesch, Roman Wittig, Catherine Crockford, Linda Vigilant, Tobias Deschner, Fabian Leendertz, 2019-11-28 An engaging account of the research and key findings on Ta chimpanzees to celebrate the 40th anniversary of this project

Neuroethology of the Colonial Mind: Ecological and Evolutionary Context of Social Brains J. Frances Kamhi, Sara Arganda Carreras, Mathieu Lihoreau, 2023-10-02 Animal groups often display striking collective organization which relies on social interactions These interactions require neural substrates supporting the exchange of information among individuals and the processing of this information The social brain hypothesis suggested from neuroanatomical findings in primates posits that increasing levels of sociality involve a higher investment in neural tissue to cope with social information However distributed cognition and swarm intelligence might alleviate the cognitive load on the individuals and potentially reduce their neural requirements Research on social insects which are an exemplar of collective action has so far produced mixed results Individual cognition and collective action have received a lot of attention and much progress has been done in each of those fields however much less is understood about how the two interact Our goal is to aggregate theoretical and experimental research exploring the links between the complexity of individual and collective behaviors Experimental research testing the social brain hypothesis showed little support for a general explanation across the animal kingdom The relationship between the cognitive abilities of animals and their social interactions are much more complex than previously thought and tackling this problem requires a better knowledge of the fundamental mechanisms underpinning socio cognitive tasks What is the information used by the animals during social interactions How much information is necessary How many neurons and which neural circuits are required for processing this information What neural connections are important Do these social interactions involve memory

formation How do the cognitive requirements and neural circuits vary between group members Answering these questions will bring considerable insights into the cognitive complexity involved for social and collective behaviors It will also advance our understanding of inter individual cognitive variability and division of labor in most socially advanced species This Research Topic will be a unique forum for researchers from different fields neurogenetics neuro ethology evolutionary ecology cognitive ecology collective animal behavior computational modeling working on different species to present up to date advances on the physiological correlates of social behavior and delineate future directions for the field of social neuroethology We welcome contributions on any aspect of the cognitive requirements of social and collective behaviors from molecular cellular and circuit level approaches to how individuals contribute to group action at the behavioral level Specific areas of interest include but are not limited to studies on the neural underpinnings of division of labor neuromodulation or neurogenetics of social behaviors the neural circuits and neuroanatomical basis of group action and how social signals affect learning and behavior We encourage submissions that present original research and review evidence or compare data from multiple species We hope to include work from different disciplines and on a wide range of species including model non model and wild animals with the aim of gaining insight into the patterns of neural investment in individual cognition

Cognitive Archaeology, Body Cognition, and the Evolution of Visuospatial Perception Emiliano Bruner, 2023-06-09 Cognitive Archaeology Body Cognition and the Evolution of Visuospatial Perception offers a multidisciplinary and comprehensive perspective on the evolution of the visuospatial ability in the human genus It presents current topics in cognitive sciences and prehistoric archaeology to provide a bridge between evolutionary anthropology and neurobiology This book explores how body perception and spatial sensing may have evolved in humans as to enhance a prosthetic capacity able to integrate the brain body and technological elements into a single functional system It includes chapters on touch and haptics peripersonal space parietal lobe evolution somatosensory integration neuroarchaeology visual behavior attention and psychometrics Cognitive Archaeology Body Cognition and the Evolution of Visuospatial Perception represents an essential resource for evolutionary biologists anthropologists archaeologists and neuroscientists who are interested in the role of body perception and spatial ability in human cognition Addresses the role of body perception and sensing in human evolution Supplies a comprehensive overview on the cognitive mechanisms associated with the integration between brain body and tools Offers a bridge between evolutionary anthropology archaeology and cognitive sciences *Wild Chimpanzees* Adam Clark Arcadi, 2018-06-21 An introduction to chimpanzee behavior and conservation synthesizing findings from long term field studies in the African rainforest belt **Wild Cultures** Christophe Boesch, 2012-09-06 A journey into the lives of chimpanzees revealing the many parallels and differences between us **The Comparative Psychology of Intelligence: Macphail Revisited** Michael Colombo, Damian Scarf, Thomas Zentall, 2021-03-15 *The Property Species* Bart J. Wilson, 2020 What is property and why does our species have it In *The Property Species* Bart J Wilson explores how humans

acquire perceive and know the custom of property and why this might be relevant to understanding how property works in the twenty first century Arguing that neither the sciences nor the humanities synthesizes a full account of property the book offers a cross disciplinary compromise that is sure to be controversial Property is a universal and uniquely human custom Integrating cognitive linguistics with philosophy of property and a fresh look at property disputes in the common law the book makes the case that symbolic thinking humans locate the meaning of property within a thing That is all human beings and only human beings have property in things and at its core property rests on custom not rights Such an alternative to conventional thinking contends that the origins of property lie not in food mates territory or land but in the very human act of creating with symbolic thought something new that did not previously exist Written by an economist who marvels at the natural history of humankind the book is essential reading for experts and any reader who has wondered why people claim things as Mine and what that means for our humanity **Comparative animal consciousness** Louis Neal Irwin,Lars Chittka,Nicky S. Clayton,Eva Jablonka,Jon Mallatt,Todd E. Feinberg,2023-07-10 **How Primates Eat** Joanna E. Lambert,Margaret A. H. Bryer,Jessica M. Rothman,2024-07-26 Exploring everything from nutrients to food acquisition and research methods a comprehensive synthesis of the study of diet and feeding in nonhuman primates What do we mean when we say that a diet is nutritious Why can some animals get all the energy they need from eating leaves while others would perish on such a diet Why don t mountain gorillas eat fruit all day as chimpanzees do Answers to these questions about food and feeding are among the many tasty morsels that emerge from this authoritative book Informed by the latest scientific tools and millions of hours of field and laboratory work on species across the primate order and around the globe this volume is an exhaustive synthesis of our understanding of what why and how primates eat State of the art information presented at physiological behavioral ecological and evolutionary scales will serve as a road map for graduate students researchers and practitioners as they work toward a holistic understanding of life as a primate and the urgent conservation consequences of diet and food availability in a changing world **Gibbon Conservation in the Anthropocene** Susan M. Cheyne,Carolyn Thompson,Peng-Fei Fan,Helen J. Chatterjee,2023-04-20 This volume brings together current research and practice on gibbon conservation ecology taxonomy and phylogenetics
