Feeding the Disabled Child Peter B. Sullivan, Lewis Rosenbloom, 1996-01-16 Disabled children often have feeding difficulty Choking food spillage and protracted mealtimes can pose enormous problems for their carers and the accompanying nutritional deficit imposes additional burdens on the affected child The aetiology of these problems is placed in context by a detailed description of normal feeding development in infants The often under recognised nutritional and neurodevelopmental consequences of inadequate nutrient intake together with the respiratory complications and the important problems of constipation and drooling which may accompany oro motor dysfunction are detailed The clinical and

nutritional assessment and the application of diagnostic imaging techniques in the evaluation of such children are described. The methods of management of these children's problems form the core of this volume and they range from oro motor therapy to various techniques for enteral feeding. The ethical issues raised by the vigorous intervention needed to improve the nutritional state of severely disabled children is explored together with the need to provide ongoing psychological support for their carers.

Dysphagia Management in Head and Neck Cancers Krishnakumar Thankappan, Subramania Iyer, Jayakumar R Menon, 2018-10-11 Dysphagia and problems related to swallowing are common following treatment for head and neck cancers. Though there are books available on dysphagia management and associated neurological conditions, this is the only atlas that comprehensively discusses dysphagia related to the head and neck cancers. It comprises of 33 chapters divided into five sections. The initial chapters present the anatomy and physiology of swallowing and the pathophysiology of the dysphagia related structures. It discusses assessment of dysphagia in detail highlighting clinical and instrumental evaluations. Swallowing dysfunction related to common sub site cancers and chemo radiotherapy related dysphagia are explored individually. The book addresses direct and indirect swallowing therapy methods involving postures and exercises in a detailed yet simple manner to enable them to be incorporated in routine practice. It also covers topics like nutritional management, alternative feeding methods and unique problems associated with tracheostomy that have a great bearing on the day to day management of patients with dysphagia. The current status of the research and evidence based management updates are also included. Additionally, where appropriate, videos are included for a better understanding of the subject. Written and edited by experts in the field, the book is intended for clinicians treating head and neck cancer, head and neck surgeons, radiation oncologists, speech and swallowing therapy specialists and trainees in these fields.
