*Rainfall-Runoff Models* Theodore V. Hromadka II,Robert J. Whitley,2012-12-06 The subject of rainfall runoff modeling  
involves a wide spectrum of topics Fundamental to each topic is the problem of accurately computing runoff at a point given  
rainfall data at another point The fact that there is currently no one universally accepted approach to computing runoff given  
rainfall data indicates that a purely deterministic solution to the problem has not yet been found The technology employed in  
the modern rainfall runoff models has evolved substantially over the last two decades with computer models becoming  
increasingly more complex in their detail of describing the hydrologic and hydraulic processes which occur in the catchment  
But despite the advances in including this additional detail the level of error in runoff estimates given rainfall does not seem  
to be significantly changed with increasing model complexity in fact it is not uncommon for the model s level of accuracy to  
deteriorate with increasing complexity In a latter section of this chapter a literature review of the state of the art in rainfall  
runoff modeling is compiled which includes many of the concerns noted by rainfall runoff modelers The review indicates that  
there is still no deterministic solution to the rainfall runoff modeling problem and that the error in runoff estimates produced  
from rainfall runoff models is of such magnitude that they should not be simply ignored      *Monthly Catalogue, United States*
