Structural Analysis of Historical Constructions Rafael Aguilar, Daniel Torrealva, Susana Moreira, Miguel A. Pando, Luis F. Ramos, 2018-08-18 This volume contains the proceedings of the 11th International Conference on Structural Analysis of Historical Constructions SAHC that was held in Cusco Peru in 2018 It disseminates recent advances in the areas related to the structural analysis of historical and archaeological constructions The challenges faced in this field show that accuracy and robustness of results rely heavily on an interdisciplinary approach where different areas of expertise from managers practitioners and scientists work together Bearing this in mind SAHC 2018 stimulated discussion on the new knowledge developed in the different disciplines involved in analysis conservation retrofit and management of existing constructions This book is organized according to the following topics assessment and intervention of archaeological heritage history of construction and building technology advances in inspection and NDT innovations in field and laboratory testing applied to historical construction and heritage new technologies and techniques risk and vulnerability assessments of heritage for multiple types of hazards repair strengthening and retrofit of historical structures numerical modeling and structural analysis structural health monitoring durability and sustainability management and conservation strategies for heritage structures and interdisciplinary projects and case studies This volume holds particular interest for all the community interested in the challenging task of preserving existing constructions enable great opportunities and also uncover new challenges in the field of structural analysis of historical and archeological constructions

Numerical Modelling of Construction Processes in Geotechnical Engineering for Urban Environment Theodoros Triantafyllidis, 2006-02-23 It has become increasingly important particularly in an urban environment to predict soil behaviour and to confine the settlement or deformation of buildings adjacent to construction sites One important factor is the choice of construction procedure for the installation of piles sheet pile walls anchors or for soil improvement techniques ground freezing and tunnelling methods The modelling of construction processes which are frequently associated with large deformations of the soil and with strong changes in the structure of the soil around the construction plant in the case of for example a drill a bit a vibrator or an excavation tool requires sophisticated and new methods in numerical modelling Often the simulation of the construction procedure is neglected in the calculations Such methods are described and discussed in this book as are examples of the methods applied to geotechnical practice field and laboratory testing as well as case studies This volume provides a valuable source of reference for scientists in geotechnical engineering and numerical modelling geotechnical engineers post graduate students construction companies and consultants manufacturers of geotechnical construction plants and software suppliers and developers of geotechnical construction methods

Manual of Numerical Methods in Concrete M Y H Bangash, 2001-07-27 Manual of numerical methods in concrete aims to present a unified approach for the available mathematical models of concrete linking them to finite element analysis and to computer programs in which special provisions are made for concrete plasticity cracking and
