Student Exploration: Circulatory System

Vocabulary: artery, atrium, blood vessel, capillary, circulatory system, heart, heart valves, platelet, pulmonary artery, pulmonary vein, red blood cell, urea, ventricle, vein, white blood cell

Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

1. Why do you need blood? It carries gasses and nutrients to and from our cells
2. What organ pushes blood through your body? Heart

Gizmo Warm-up

The *Circulatory System* Gizmo shows the **heart** and **blood vessels** that make up the **circulatory system**. Look at the heart.

1. How many chambers does the heart have? 4
2. Turn on **Show labels**. What are the names of the chambers? Right atrium, right ventricle, left atrium, left ventricle

3. Do you see tiny "doors" that open and close as blood is pumped through the heart? yes

These are **heart valves**. Heart valves control the flow of blood through the heart.

4. Click **Heartbeat sound** and listen for the two parts of the heartbeat, nicknamed "lub" and "dub." Observe the heart. (Note: The recording is not in sync with the heart animation.)

What do you think causes heartbeat sounds? The opening and closing of valves in the heart

In fact, the "lub" sound is caused by valves from the **atria** to the **ventricles** closing, and the "dub" sound is caused by the valves from the ventricles to the blood vessels closing.

5. Challenge: Why do you think the left atrium and left ventricle are shown on the *right* side of the diagram? Because they are the left side of the body, but it is on the observers right

Understanding and Developing Science Teachers'

Pedagogical Content Knowledge John Loughran, Amanda Berry, Pamela Mulhall, 2012-07-31 There has been a growing interest in the notion of a scholarship of teaching. Such scholarship is displayed through a teacher's grasp of and response to the relationships between knowledge of content teaching and learning in ways that attest to practice as being complex and interwoven. Yet attempting to capture teachers' professional knowledge is difficult because the critical links between practice and knowledge for many teachers is tacit. Pedagogical Content Knowledge (PCK) offers one way of capturing, articulating, and portraying an aspect of the scholarship of teaching and in this case the scholarship of science teaching. The research underpinning the approach developed by Loughran, Berry, and Mulhall offers access to the development of the professional knowledge of science teaching in a form that offers new ways of sharing and disseminating this knowledge. Through this Resource Folio approach comprising CoRe and PaP eRs, a recognition of the value of the specialist knowledge and skills of science teaching is not only highlighted but also enhanced. The CoRe and PaP eRs methodology offers an exciting new way of capturing and portraying science teachers' pedagogical content knowledge so that it might be better understood and valued within the profession. This book is a concrete example of the nature of scholarship in science teaching that is meaningful, useful, and immediately applicable in the work of all science teachers, preservice in service, and science teacher educators. It is an excellent resource for science teachers as well as a guiding text for teacher education. Understanding teachers' professional knowledge is critical to our efforts to promote quality classroom practice. While PCK offers such a lens, the construct is abstract. In this book, the authors have found an interesting and engaging way of making science teachers' PCK concrete, useable, and meaningful for researchers and teachers alike. It offers a new and exciting way of understanding the importance of PCK in shaping and improving science teaching and learning. Professor Julie Gess-Newsome, Dean of the Graduate School of Education, Willamette University. This book contributes to establishing CoRes and PaP eRs as immensely valuable tools to illuminate and describe PCK. The text provides concrete examples of CoRes and PaP eRs completed in real-life teaching situations that make stimulating reading. The authors show practitioners and researchers alike how this approach can develop high-quality science teaching. Dr. Vanessa Kind, Director, Science Learning Centre, North East School of Education, Durham University.
