Practical Aspects of Declarative Languages Shriram Krishnamurthi, C.R. Ramakrishnan, 2003-06-30 Declarative languages build on sound theoretical bases to provide attractive frameworks for application development. These languages have been successfully applied to a wide variety of real world situations including database management, active networks, software engineering, and decision support systems. New developments in theory and implementation expose fresh opportunities. At the same time, the application of declarative languages to novel problems raises numerous interesting research issues. These well known questions include scalability, language extensions for application deployment, and programming environments. Thus, applications drive the progress in the theory and implementation of declarative systems, and in turn benefit from this progress. The International Symposium on Practical Applications of Declarative Languages (PADL) provides a forum for researchers, practitioners, and implementors of declarative languages to exchange ideas on current and novel applications and on the requirements for effective use of declarative systems. The fourth PADL symposium was held in Portland, Oregon, on January 19 and 20, 2002.

Neuroimaging Workflow Design and Data-Mining John Van Horn,2012-04-01 With the increasing number of neuroimaging studies appearing yearly in the literature the need to consider the synthesis of the underlying data into new knowledge and research directions has never been more important The development of large scale databases and grid enabled computing has laid the groundwork for mining these rich datasets beyond the scope of their initial collection Additionally meta analyses of the summary results contained in published research articles have provided a powerful way to explore hidden trends in the neuroscience literature In each case the processing of data requires a careful consideration of the individual processing steps involved and how they can be assembled into reliable workflows In results from published studies the manner in which data were processed may influence meta analytic results which can have implications on clinical interpretation Several efforts now exist that provide tools for use in the construction of data processing workflows However careful thought must be given to ensuring appropriate efficient optimal and replicable processing The results obtained from data mining and meta analysis must tell a story about a collection of existing data Also they must suggest novel and testable hypotheses for further investigation with implications for understanding of the brain in health and disease Where they do these new results and interpretations often provide fresh insights into the data that extend beyond the rationale for their original collection In this volume we have asked leaders in the field of neuroimaging data mining and meta analysis to provide their thoughts on methods for efficient workflow design interoperability with large scale databases and to discuss their work in exploring the richness of brain imaging data as well as the literature of published research results *Oracle JDeveloper 10g for Forms & PL/SQL Developers: A Guide to Web Development with Oracle ADF* Peter Koletzke,Duncan Mills,2006-09-28 The most efficient way to learn J2EE programming techniques Two Oracle experts demonstrate techniques for working within J2EE and JDeveloper for the thousands of developers currently using Oracle Forms and the PL SQL language Oracle is shifting their focus towards Java technologies so you will need to know how to use the Java based J2EE and JDeveloper The book includes explanations of the Application Development Framework ADF Throughout high level and low level Forms concepts are related to Java concepts so that you can become comfortable with the new terminology Covers
