Columbia River Basin salmon and steelhead populations were once the world's largest. Before 1550 an estimated 16 million salmon and steelhead returned to the basin annually to spawn. Over the past 25 years however the number of salmon and steelhead returning to the Columbia River Basin has averaged around 660,000 per year although annual population levels have varied widely. Various factors have contributed to the long term decline including over harvesting, the construction and operation of dams, the degradation of spawning habitat, increased human population and unfavorable weather and ocean conditions. The population decline has resulted in the listing of 12 salmon and steelhead populations in the basin as threatened or endangered under the Endangered Species Act (ESA). Once a species is listed as threatened or endangered the ESA requires that efforts be taken to allow the species to recover. The Department of Commerce's National Marine Fisheries Service (NMFS) is the lead agency responsible for the recovery of the threatened or endangered populations of Columbia River Basin salmon and steelhead. The recovery of a species entails the development and implementation of a plan for the species conservation and survival. The ESA also requires other federal agencies to consult with NMFS before they take any action that may jeopardize the continued existence of listed salmon or steelhead populations in the Columbia River Basin. You asked us to:

- 1 identify the roles and responsibilities of the federal agencies involved with the recovery of Columbia River Basin salmon and steelhead
- 2 determine how much they have spent

collectively on recovery efforts and 3 determine what recovery actions they have undertaken and what they have accomplished The Routledge Handbook of Planning Megacities in the Global South Deden Rukmana,2020-06-04 Cities are now home to 55% of the world s population and that number is rising Urban populations across the world will continue to grow including in megacities with populations over ten million In 2016 there were 31 megacities globally according to the United Nations World Cities Report with 24 of those cities located in the Global South That number is expected to rise to 41 by 2030 with all ten new megacities in the Global South where the processes of urbanization are intrinsically distinct from those in the Global North The Routledge Handbook of Planning Megacities in the Global South provides rigorous comparative analyses discussing the challenges processes best practices and initiatives of urbanization in Middle America South America the Middle East Africa South Asia East Asia and Southeast Asia This book is indispensable reading for students and scholars of urban planning and its significance as a resource will only continue to grow as urbanization reshapes the global population
