

Phylogenetic Trees

How do the changes in gene sequences allow us to reconstruct the evolutionary relationships between related species?

Why?

The saying "Don't judge a book by its cover," could be applied to the topic of evolution. For example, humans share 75% of their DNA with chickens. Biologists point to this as evidence that humans and chickens once shared a common ancestor. The advent of DNA technology has given scientists the tools with which to examine how closely related certain species are. DNA analysis allows scientists to construct phylogenetic trees whose branches link together the relatedness of different organisms.

Model 1 – Phylogenetic Trees

1. Refer to Model 1.
 - a. How long ago did the common ancestor of all the organisms on this phylogenetic tree exist?
35 mil.
 - b. Which two lines diverged 30 million years ago?
bear and panda
 - c. List all modern descendants of the organism that was alive at the point indicated by the asterisk.
every thing except
black and polar

Pogil Activities For Ap Biology Phylogenetic Trees:

Phylogenetic Trees Made Easy Barry G. Hall, 2008 Barry G Hall helps beginners get started in creating phylogenetic trees from protein or nucleic acid sequence data **Phylogenetic Trees and Molecular Evolution** David R.

Bickel, 2022-09-29 This book serves as a brief introduction to phylogenetic trees and molecular evolution for biologists and biology students It does so by presenting the main concepts in a variety of ways first visually then in a history next in a dice game and finally in simple equations The content is primarily designed to introduce upper level undergraduate and graduate students of biology to phylogenetic tree reconstruction and the underlying models of molecular evolution A unique feature also of interest to experienced researchers is the emphasis on simple ways to quantify the uncertainty in the results more fully than is possible with standard methods *Tree Thinking: An Introduction to Phylogenetic Biology* David A.

Baum, Stacey D. Smith, 2012-08-10 Baum and Smith both professors evolutionary biology and researchers in the field of systematics present this highly accessible introduction to phylogenetics and its importance in modern biology Ever since Darwin the evolutionary histories of organisms have been portrayed in the form of branching trees or phylogenies However the broad significance of the phylogenetic trees has come to be appreciated only quite recently Phylogenetics has myriad applications in biology from discovering the features present in ancestral organisms to finding the sources of invasive species and infectious diseases to identifying our closest living and extinct hominid relatives Taking a conceptual approach *Tree Thinking* introduces readers to the interpretation of phylogenetic trees how these trees can be reconstructed and how they can be used to answer biological questions Examples and vivid metaphors are incorporated throughout and each chapter concludes with a set of problems valuable for both students and teachers *Tree Thinking* is must have textbook for any student seeking a solid foundation in this fundamental area of evolutionary biology **Phylogenetic Comparative Methods** Luke J.

Harmon, 2018-05-23 An introduction to statistical analyses of phylogenetic trees using comparative methods *Data Integration, Manipulation and Visualization of Phylogenetic Trees* Guangchuang Yu, 2022-08-26 *Data Integration Manipulation and Visualization of Phylogenetic Trees* introduces and demonstrates data integration manipulation and visualization of phylogenetic trees using a suite of R packages tidytree treeio ggtree and ggtreeExtra Using the most comprehensive packages for phylogenetic data integration and visualization contains numerous examples that can be used for teaching and learning Ideal for undergraduate readers and researchers with a working knowledge of R and ggplot2 Key Features Manipulating phylogenetic tree with associated data using tidy verbs Integrating phylogenetic data from diverse sources Visualizing phylogenetic data using grammar of graphics *The Compleat Cladist* E. Reconstructing Phylogenetic Trees from Evolutionary Data Arturo E. Jurado, 2010 *Identifying Phylogenetic Trees* Magnus Bordewich, Charles Semple, Katharina Theresia Huber, University of Canterbury. Department of Mathematics

and Statistics,2004 Species Tree Inference Laura Kubatko,L. Lacey Knowles,2023-03-14 Inferring evolutionary relationships among a collection of organisms that is their relationship to each other on the tree of life remains a central focus of much of evolutionary biology as these relationships provide the background for key hypotheses For example support for different hypotheses about early animal evolution are contingent upon the phylogenetic relationships among the earliest animal lineages Within the last 20 years the field of phylogenetics has grown rapidly both in the quantity of data available for inference and in the number of methods available for phylogenetic estimation The authors first book *Estimating Species Trees Practical and Theoretical Aspects* published in 2010 gave an overview of the state of phylogenetic practice for analyzing data at the time but much has changed since then The goal of this book is to serve as an updated reference on current methods within the field The book is organized in three sections the first of which provides an overview of the analytical and methodological developments of species tree inference Section two focuses on empirical inference Section three explores various applications of species trees in evolutionary biology The combination of theoretical and empirical approaches is meant to provide readers with a level of knowledge of both the advances and limitations of species tree inference that can help researchers in applying the methods while also inspiring future advances among those researchers with an interest in methodological development *Automobile Phylogenetic Tree* , Al Vogel presents An Automobile Phylogenetic Tree an activity for high school biology or life science classes requiring the construction of a phylogenetic tree for various cars and trucks Access Excellence a service of the nonprofit National Museum of Health provides the activity online The activity was created as part of the National Leadership Program for Teachers of the Woodrow Wilson National Fellowship Foundation Combinatorial Algorithms for Constructing Phylogenetic Trees Tandy Jo Warnow,1991 A *Phylogenetic Tree of the Animal Kingdom (including Orders and Higher Categories)* Jarmila Kukalová-Peck,1973 Models and Estimation for Phylogenetic Trees Faisal Ababneh,2006 *Deriving phylogenetic trees from non-coding DNA* Reazur Rahman,2004 **Classification Using Phylogenetic Trees** Min-Hui Wang,1999 Facility Location in the Phylogenetic Tree Space Marco Botte,2019 Phylogenetics is a field of biology trying to describe the evolutionary history of a given set of populations or species Evolutionary relationships are obtained through statistical models for phylogenetic inference In this thesis we aim to find the phylogenetic tree that best describes the evolutionary history of the given species also called the species tree Unfortunately when applying phylogenetic inference methods to different genes that the species share the outcome varies This results in a set of possible phylogenetic trees which we use to try to infer the true species tree Th

Maximum Likelihood Estimation of Phylogenetic Trees Bo Lin,2001 This thesis is concerned with the statistical techniques used in the molecular phylogenetics We introduce some basic concepts in molecular biology such as how the Markov model describes the evolutionary process and use the likelihood method to re construct the evolutionary tree with the DNA sequences In this thesis we did some simulation studies to show how the parameters setting and other factors affect

the accuracy of reconstruction results In the Chapter 4 we showed how the rate among sites affect the reconstruction result comparing it with only using common rate across sites situation

Investigating the Development and Use of Phylogenetic Representations by College Undergraduates in a Plant Systematics Course Kristy Lynn Halverson, 2009
Representations are critical tools for visualizing complex scientific knowledge However there is limited research investigating how students gain representational competence in biology specifically in evolution In evolutionary biology phylogenetic trees are generated to represent evolutionary relationships among taxa Unfortunately these trees are not well understood by students In this study I used open ended student responses from pre posttests interviews reflective journal entries field notes and course assessments to learn how 27 upper level undergraduate students enrolled in a plant systematics course used phylogenetic trees and developed tree thinking skills I identified a 10 approaches students used to interpret phylogenetic trees and 5 criteria used to compare representations b 8 alternative student generated representations and that some students were not able to generate any representation to illustrate a given phylogenetic scenario and c improvements in students overall tree thinking with greater improvement in tree reading than tree building During the course students were exposed to 3 instructional interventions to improve their tree thinking skills I identified 16 core skills necessary for students to develop competence in tree reading and tree building I proposed 7 levels of representational competence Levels 0 6 based on these core skills This empirical framework for representational competence in tree thinking will inform the design of evolution curriculum and maximize the instructional potential of using phylogenetic representations
