Social Cognitive Theory
Beverly P. Morris

In this essay I will discuss what I have learned about social cognitive theory. I will give an overview of the main functional components of the theory and discuss how social cognitive theory can be applied to understanding exigent situations described in various readings on this topic.

Social cognitive theory accounts for the social origin of human thought and action. Albert Bandura, Ph.D. developed social cognitive theory (SCT) in the 1980s. In *Social Foundations of Thought & Action: A Social Cognitive Theory"* Bandura writes that SCT expands the scope of its precursor, *social learning theory,* by encompassing "psychosocial phenomena that extend beyond issues of learning" (*Foundations* xii). He distinguishes STC from social learning theory by explaining the two-part meaning of the new label. "The social portion of the terminology acknowledges the social origins of much human thought and action; the cognitive portion recognizes the influential causal contribution of thought processes to human motivation, affect, and action. The relabeling carries no claim of theoretical parentage" (*Foundations* xii).

From the SCT perspective, human functioning is influenced by the reciprocal interaction of various behavioral determinants, cognitive and other personal factors, and environmental events (*Foundations* 18). Humans exercise certain capabilities within this reciprocal framework to function successfully. The capabilities are symbolizing, forethought, vicarious, self-regulatory, self-reflective, and inherent.

- **Symbolizing capability**—the human capacity for symbolizing affords freedom from the onerous and sometimes dangerous trial-and-error process of learning from experience. Symbolizing allows abstract thought through which the individual can conceptualize possible experience and test it out with rational thought.
- **Forethought capability**—Most human behavior is purposive and therefore "regulated by forethought" (*Foundations* 19). Forethought can entail weighing probable consequences of actions, establishing goals, and planning courses of action (*Foundations* 19). Symbolizing is a tool for carrying out forethought. It enables the individual to conceptualize a behavior and its outcome and create motivation or inhibition to guide the selection of a course of action.
- **Vicarious capability**—A person can learn a behavior by observing the actions of others and the consequences of those actions. The human capacity for learning vicariously also precludes the need for the trial-and–error, learning-by-action approach to achieving behavior. Humans learn many important activities by modeling observed behavior— language, for example, or driving a car. The human capability for vicarious experience is fed by burgeoning mass communications outlets that provide a rich symbolic environment that expands modeling opportunities.

Kihlstrom,Gordon H. Bower,Joseph P. Forgas,Paula M. Niedenthal,2000-08-24 Recent years have witnessed a revival of research in the interplay between cognition and emotion The reasons for this renaissance are many and varied In the first place emotion theorists have come to recognize the pivotal role of cognitive factors in virtually all aspects of the emotion process and to rely on basic cognitive factors and insight in creating new models of affective space Also the successful application of cognitive therapies to affective disorders has prompted clinical psychologists to work towards a clearer understanding of the connections between cognitive processes and emotional problems And whereas the cognitive revolutionaries of the 1960s regarded emotions with suspicion viewing them as nagging sources of hot noise in an otherwise cool rational and computer like system of information processing cognitive researchers

of the 1990s regard emotions with respect owing to their potent and predictable effects on tasks as diverse as object perception episodic recall and risk assessment These intersecting lines of interest have made cognition and emotion one of the most active and rapidly developing areas within psychological science Written in debate format this book covers developing fields such as social cognition as well as classic areas such as memory learning perception and categorization The links between emotion and memory learning perception categorization social judgements and behavior are addressed Contributors come from the U S Canada Australia and France   **Essays in Group-Cognitive Science** Gerry Stahl,2015-10 Essays in Group Cognitive Science intros to CSCL research methodology and findings Vol 10 of Gerry Stahl s assembled texts   **A Professional Research and Knowledge Taxonomy for Youth Development** Sandra L.
