**The Handbook of Social Work and Social Development in Africa** Mel Gray, 2016-10-26. All recent books on international social work mention Africa only briefly and few engage with the broader field of development studies. This book focuses solely on the unique African context, engaging with issues relating to social work and development more broadly, thus enabling a deeper examination and more complex and nuanced picture to emerge. Unlike most academic works, this book highlights multiple practitioner voices with authors or co-authors that have recently been or are currently practising social workers. As an edited book, it draws from both academic research as well as lived practice experience, supported by strong theoretical positioning and guidance in introductory chapters drawing on African literature wherever possible. Looking at case studies from Lesotho, Botswana, Kenya, Zimbabwe, Ethiopia, Namibia, Uganda, Nigeria, Kenya, South Africa, Rwanda, Zambia and Tanzania and covering established areas of practice such as child protection, working with older people, working with people with disabilities, mental health and mainstream services targeting women, as well as emerging areas of developmental social work practice such as humanitarian assistance in post-conflict situations, work with immigrants and refugees and the training of community-based workers, this book takes a future-oriented perspective that aims to move beyond well-worn critiques to envision constructive and sustainable futures for social work and social development in Africa from a critical perspective.

Computational Social Science R. Michael Alvarez, 2016-03-07. Quantitative research in social science research is changing rapidly. Researchers have vast and complex arrays of data with which to work; we have incredible tools to sift through the data and recognize patterns in that data; there are now many sophisticated models that we can use to make sense of those patterns; and we have extremely powerful computational systems that help us accomplish these tasks quickly. This book focuses on some of the extraordinary work being conducted in computational social science in academia, government and the private sector while highlighting current trends, challenges and new directions. Thus, Computational Social Science showcases the innovative methodological tools being developed and applied by leading researchers in this new field. The book shows how academics and the private sector are using many of these tools to solve problems in social science and public policy.

**Psychology in Action** Kai Sassenberg, Michael L.W. Vliek, 2019-07-01 This timely and applied textbook brings together leading scientists to illustrate how key theories and concepts in social psychology help to predict and explain behavior and can be successfully applied to benefit social and practical problems. It focuses on robust theories and models known for their successful applications and covers a diverse range of settings spanning classroom interventions, health behavior, financial decision making, climate change, and much more. Each chapter comprises of a theoretical section to define the key concepts and summarize the theory, providing evidence for its reliability and limitations from basic research, as well as an application section that summarizes research in an applied context and provides details about a particular study, including the respective application setting. The textbook expertly shows how theory can make meaningful predictions for real world contexts and isn't afraid to explain the potential hurdles and pitfalls when applying a theory and its underlying set of concepts in a certain context. Crucially, this format moves towards theory testing in applied contexts, enabling a closer examination of why and under what circumstances interventions may be successful in obtaining a desired behavioral or psychological end state. Among the topics explored: Mindset, theory of action phases and if-then planning, Quality of motivation in self-determination theory, The focus theory of normative conduct, Social identity theory and intergroup contact theory, Intergroup forgiveness. Social Psychology in Action is a critical resource for advanced undergraduate and graduate students in social and cultural psychology, as well as students of behavioral economics seeking to develop a deeper understanding of major theories and applications of the field. Practitioners working in the areas of organizational behavior and management, health communication, social work, and educational science and pedagogy will also find the volume pertinent to their work.

to be biased and statistical decisions are very likely to be incorrect Problems associated with dependence in data have been known for a long time and led to the development of tailored methods for the analysis of dependent data in various areas of statistical analysis These include for example methods for the analysis of longitudinal data corrections for dependency and corrections for degrees of freedom Researchers and graduate students in the social and behavioral sciences education econometrics and medicine will find this up to date overview of modern statistical approaches for dealing with problems related to dependent data particularly useful
