Britain and Disarmament John R. Walker,2016-04-15 Since the use of poison gas during the First World War and the dropping of atomic bombs on Japan at the end of the Second World War nuclear biological or chemical NBC weapons have registered high on the fears of governments and individuals alike Recognising both the particular horror of these weapons and their potential for inflicting mass death and destruction much effort has been expended in finding ways to eliminate such weapons on a multi lateral level Based on extensive official archives this book looks at how successive British governments approached the subject of control and disarmament between 1956 and 1975 This period reflects the UK s landmark decision in 1956 to abandon its offensive chemical weapons programme a decision that was reversed in 1963 but never fully implemented and ends with the internal travails over the possible use of CR tear gas in Northern Ireland Whilst the issue of nuclear arms control has been much debated the integration of biological and chemical weapons into the wider disarmament picture is much less well understood there being no clear statement by the UK authorities for much of the period under review in this book as to whether the country even possessed such weapons or had an active research and development programme Through a thorough exploration of government records the book addresses fundamental questions relating to the history of NBC weapons programmes including the military economic and political pressures that influenced policy the degree to which the UK was a reluctant or enthusiastic player on the international arms control stage and the effect of international agreements on Britain s weapons programmes In exploring these issues the study provides the first attempt to assess UK NBC arms control policy and practice during the Cold War Losing an Empire and Finding a Role K.
