

that such rapid multiplication is the normal or natural state of affairs, and that it will and must continue indefinitely. But that is a gross error. We are, as I said, nearing the close of that great and unique period. Mankind has now to return and to adjust its customs to something like the older order of things, namely, an approximately stationary population. Once more, as throughout the ages preceding the 19th century, the enormous potential fecundity of mankind must be severely limited."

Space does not allow of any detailed reference to the interesting "Suggestions towards the Synthesis" of the two system of ethics, nor to the plan—in the Appendix—"for bringing about the Disarmament of Nations and the Reign of International Justice." As to the practicability of the latter, opinions will probably differ, but all will agree on the urgency of the problem and the incalculable benefit to mankind which would result from its solution. Of the book as a whole we may say that its matter should be of supreme interest to every person who is not blind to the perils by which civilization is beset; that that matter is conveyed to the reader lucidly, forcibly and in an agreeable and readable style; and that the writing and publication of the work constitute a public service the value of which should be widely appreciated.

**McDougall, William, F.R.S.**, Professor of Psychology in Harvard University; formerly Reader in the University of Oxford.  
*An Outline of Psychology*. London, Methuen & Co., N.D.  
Pp. xii, 456. Price 12s. nett.

THE student who sets out to acquire a knowledge of Psychology is apt to find himself confronted by unexpected difficulties. In the case of most branches of knowledge the subject-matter is clearly defined, the student knows in advance the kind of information which he is seeking, and the perusal of an elementary text-book puts him in conscious possession of a mass of new knowledge. The case of Psychology is somewhat different. Here, at the outset, the student is disconcerted by the discovery that the subject-matter of his studies is not fully agreed on but is affected by conflicting opinions and hypotheses. The perusal of a text-book may, if he is unfortunate in his choice, leave him with the feeling that it is his vocabulary rather than his knowledge which has been added to; and he is further bewildered by discovering the existence of certain "systems" of Psychology which appear to be purely artificial and to rest upon no basis of ascertained fact.

To these difficulties Professor McDougall is fully alive, and in the preface and introductory chapter disposes of them so far as is possible in the present state of knowledge. His purpose, as set forth in the Preface has been to produce a book "which will introduce the student to his science, which will aim at giving him at the outset of his studies a profitable line of approach, a fruitful way of thinking of psychological problems, and a terminology as little misleading as possible." The two alternative routes are "(1) that of mechanistic science, which interprets all its processes as mechanical sequences of cause and effect, and (2) that of the sciences of mind, for which purposive striving is a
