

## Chapter 7 – Memory Management

## True / False Questions

1. T / F – In a multiprogramming system, main memory is divided into multiple sections: one for the operating system (resident monitor, kernel) and one for the set of processes currently being executed.
2. T / F – The task of subdividing memory between the OS and processes is performed automatically by the OS and is called relocation.
3. T / F – The practice in which a program and data are organized in such a way that various modules can be assigned the same region of memory is called overlaying.
4. T / F – The concept of virtual memory is based on one or both of two basic techniques: segmentation and paging.
5. T / F – A major problem with the largely obsolete Fixed Partitioning memory management technique is that of external fragmentation.
6. T / F – The problem of internal fragmentation can be lessened in a system employing a fixed-partition memory management scheme by using unequal size partitions.
7. T / F – In the Dynamic Partitioning technique of memory management, the best fit placement algorithm is usually the best performer of the available algorithms.
8. T / F – In the Dynamic Partitioning technique of memory management, compaction refers to shifting the processes into a contiguous block, resulting in all the free memory aggregated into a single block.
9. T / F – In the Dynamic Partitioning technique of memory management, the first fit placement algorithm scans memory from the location of the last placement and chooses the first available block it finds that satisfies the request.
10. T / F – The Buddy System is a reasonable compromise to overcome the disadvantages of both the fixed and variable partition schemes.
11. T / F – A physical memory address is a reference to a memory location independent of the current assignment of data to memory.
12. T / F – A memory system employing paging may suffer slightly from internal fragmentation and experiences no external fragmentation.

13. T / F – In a memory system employing paging, the chunks of a process (called frames) can be assigned to available chunks of memory (called pages).

14. T / F – A memory system employing segmentation may suffer slightly from external fragmentation and experiences no internal fragmentation.

15. T / F – A memory system employing segmentation consists of a number of user program segments that must be of the same length and have a maximum segment length.

## Multiple Choice Questions

1. The task of subdividing memory between the OS and processes is performed automatically by the OS and is called
  - a. Protection
  - b. Relocation
  - c. Memory Management
  - d. All of the above
2. The concept of Memory Management satisfies certain system requirements, including:
  - a. Protection
  - b. Relocation
  - c. Physical organization
  - d. All of the above
3. The practice in which a program and data are organized in such a way that various modules can be assigned the same region of memory is called:
  - a. Overlaying
  - b. Sharing
  - c. Relocation
  - d. None of the above
4. The concept of virtual memory is based on one or both of two basic techniques:
  - a. Overlaying and relocation
  - b. Segmentation and paging
  - c. Segmentation and partitioning
  - d. None of the above
5. A problem with the largely obsolete Fixed Partitioning memory management technique is that of:
  - a. Allowing only a fixed number of Processes
  - b. Inefficient use of memory
  - c. Internal fragmentation
  - d. All of the above
6. The problem of internal fragmentation can be lessened in systems employing a fixed-partition memory management scheme by using:
  - a. Random size partitions
  - b. Equal size partitions
  - c. Unequal size partitions
  - d. None of the above
7. In the Dynamic Partitioning technique of memory management, the phenomenon that results in unused blocks of memory outside of existing partitions is called:
  - a. Internal fragmentation
  - b. External fragmentation
