**Digital Signal Processing in Power Electronics Control Circuits** Krzysztof Sozański, 2013-07-03 Many digital control circuits in current literature are described using analog transmittance. This may not always be acceptable, especially if the sampling frequency and power transistor switching frequencies are close to the band of interest. Therefore, a digital circuit is considered as a digital controller rather than an analog circuit. This helps to avoid errors and instability in high frequency components. **Digital Signal Processing in Power Electronics Control Circuits** covers problems concerning the design and realization of digital control algorithms for power electronics circuits using digital signal processing (DSP) methods. This book bridges the gap between power electronics and DSP. The following realizations of digital control circuits are considered: digital signal processors, microprocessors, microcontrollers, programmable digital circuits. Discussed in this book is signal processing starting from analog signal acquisition through its conversion to digital form, methods of its filtration and separation, and ending with pulse control of output power transistors. The book is focused on two applications for the considered methods of digital signal processing: an active power filter and a digital class D power amplifier. The major benefit to readers is the acquisition of specific knowledge concerning discussions on the processing of signals from voltage or current sensors using a digital signal processor and to the signals controlling the output inverter transistors. Included are some Matlab examples for illustration of the considered problems.

**Marine Navigation and Safety of Sea Transportation** Adam Weintrit, 2013-06-04 The TransNav 2013 Symposium held at the Gdynia Maritime University, Poland, in June 2013 has brought together a wide range of participants from all over the world. The program has offered a variety of contributions allowing to look at many aspects of the navigational safety from various different points of view. Topics presented and discussed at the Symposium were navigation safety at sea, sea transportation education of navigators and simulator based training, sea traffic engineering, ship's manoeuvrability, integrated systems, electronic charts, systems, satellite radio navigation and anti collision systems, and many others. This book is part of a series of four volumes and provides an overview of advances in Marine Navigation and is addressed to scientists and professionals involved in research and development of navigation safety of navigation and sea transportation.
