Rossi, 2016-09-07 Esta obra visa permitir aos ortodontistas e estudantes o planejamento de casos clínicos com facilidade e objetividade. Esta obra visa permitir aos ortodontistas e estudantes o planejamento de casos clínicos com facilidade e objetividade. **Manual de ortodonzia** Josep María Ustrell i Torrent, 2011-02 La ortodonzia es considerada una especialidad de la odontología porque requiere unos conocimientos de diagnóstico de la maloclusión y planificación del tratamiento muy específicos y que deben sustentarse en una buena relación con otras especialidades. Esta complejidad necesita de un largo periodo de enseñanza y dedicación exclusiva. En este manual podemos encontrar las bases necesarias para cumplir estos requisitos. Los capítulos se deben a aquellas personas que de una forma u otra han colaborado con el coordinador Josep Maria Ustrell en distintos centros universitarios de diferentes países. El Manual de Ortodonzia se ha elaborado con la pretensión de que sea una buena herramienta para los alumnos tanto de pregrado como de posgrado y debemos agradecer a la Universidad de Barcelona su publicación. Parâmetros faciais e dentários de referência para indicação do tratamento ortodôntico-cirúrgico em pacientes com deformidades dentofaciais padrão II. , 2006 O objetivo do presente estudo foi determinar os parâmetros morfológicos faciais e dentários que devem ser utilizados como referência pelo profissional ortodontista e cirurgião para indicação do tratamento ortodôntico-cirúrgico em pacientes com deformidades dentofaciais. Do Padrão II Foram selecionados 40 pacientes brasileiros com crescimento finalizado 26 do gênero feminino e 14 do masculino com ângulo de convexidade facial maior que 12° e exposição gengival no sorriso igual ou menor a 3 mm. Foram excluídos os indivíduos xantodermas e melanodermas ou aqueles que já se submeteram a qualquer cirurgia facial. Foram obtidas fotografias extrabucais de frente, de perfil e do sorriso, fotografias intrabucais frontal e laterais direita e esquerda, modelos de gesso e telerradiografias do perfil facial de todos os pacientes. Toda essa documentação foi digitalizada e os arquivos enviados para 30 professores de cursos de Pós-graduação em

Ortodontia Os avaliadores foram solicitados a determinar em uma lista de fatores relacionados ao diagnóstico ortodôntico os que eles consideravam de extrema, moderada ou pequena/nenhuma importância na indicação da cirurgia ortognática. Posteriormente, deveriam avaliar os arquivos com as documentações ortodônticas para classificar a estética facial agradável, aceitável, desagradável e a melhor opção de tratamento: tratamento ortodôntico, compensatório, tratamento ortodôntico-cirúrgico ou nenhum tratamento para cada paciente da amostra. Foram obtidas as medidas das variáveis da análise facial numérica do perfil nas fotografias do perfil facial da sobressaliência e da sobremordida nos modelos de gesso das inclinações dos incisivos superiores e inferiores além do tipo facial nas telerradiografias do perfil. Testou-se então a associação entre cada uma das variáveis acima além da idade e do gênero e a indicação do tratamento ortodôntico-cirúrgico e a partir das variáveis que apresentaram associação, estabeleceu-se uma equação matemática.

Efeito do tratamento da deformidade dentofacial na função mastigatória, atividade eletromiográfica e espessura dos músculos da mastigação Luciana Vitaliano Voi Trawitzki, 2004. Continua a ser observada uma diminuição do predomínio mastigatório após a correção cirúrgica. Houve diferença na atividade EMG entre os lados de direita e esquerda na mastigação para os 3 grupos com variações nas 2 análises de EMG aplicadas. Durante a mastigação, na análise de RMS, verificaram-se valores maiores no lado direito nos grupos GC e P1, com valores maiores para o lado esquerdo no grupo P2, o que não ocorreu na análise do IA de EMG. Houve um aumento na atividade EMG após a cirurgia. Os grupos P1 e P2 apresentaram valores menores de atividade EMG comparados ao GC. Nos 3 grupos, verificaram-se valores maiores de espessura do músculo M durante a mastigação comparada ao repouso, não houve diferença entre os lados. Houve um aumento na espessura do músculo M no grupo P2, porém os valores ainda foram menores que o GC. Houve correlação entre a espessura do MD e P. Pode-se concluir que os pacientes apresentaram melhora da função mastigatória apesar de não estar adequada em todos os pacientes. Houve um aumento da atividade EMG dos músculos T e M e da espessura do músculo M após a correção cirúrgica da deformidade dentofacial acompanhada de um tratamento interdisciplinar, porém os valores ainda foram menores que o GC.
