Charge-backs

Carrier: When our vendor uses a carrier different from the Medline specified carrier, a chargeback is calculated by subtracting the Medline specified carrier freight charge from the actual carrier freight charge.

Insurance: Do not insure or declare value on any collect shipment unless authorized by Medline. Any declared value surcharge for insurance will be charged back in full.

Freight Terms:

On "Prepaid" shipments, or when a vendor does not conform to the freight terms specified on the Medline purchase order, the vendor will pay all freight and accessorial charges associated with the shipment.

(Note: If a vendor allows the carrier to sign the Bill of Lading based on pallet count, rather than piece count, Medline will not accept responsibility for case count shortages. Permitting a carrier to sign for pallet count, inserting a shipper load and count notation, said to contain (STC), unable to count (UTC) or including a "shrink wrapped skids" notation on the shipping documents places the responsibility for case count shortages with the vendor or the carrier and Not Medline Industries.)

Transportation Management with SAP TM 9 Jayant Daithankar, Tejkumar Pandit, 2014-08-07 The implementation of a TMS solution is a highly complex and mission critical project. If executed correctly, a good TMS can deliver a number of benefits to the organization in terms of optimization, greater efficiency, reduced errors, and improved revenue through accurate invoicing. However, a number of projects fail to realize these benefits for a host of reasons such as an incorrect product selection, over customization of the system, and lack of detailed processes. The evaluation and selection of the right transportation management system is a very critical step in the successful implementation of a TMS product as well as ensuring that the organization is able to realize the benefits expected from the system. Transportation Management with SAP TM 9 is a guide for CIOs and CXOs evaluating options for various transportation management solutions available in the market and helps in appropriate decision making before committing investment. A proven evaluation framework and guidance provided in the book can help decision makers with product selection and help to create a business case for management approval and design a future roadmap for the organization. The book provides a comprehensive understanding of what SAP transportation management is and is useful for teams involved in TM implementation and roll outs to ensure preparedness. The book explains end-to-end freight life cycle processes, functional system landscape, implementation challenges, and post-go-live precautions required to optimize investments in SAP TM. Transportation Management with SAP TM 9 also acts as a step-by-step implementation guide with details of configuration required to set up a TM9 system. This book also covers the upgrade of SAP TM8 to SAP TM9, which will be useful for existing clients who are on TM 8. Nonavailability of SAP TM skilled resources is a major challenge faced by organizations, and the book provides a detailed competency building plan along with skill set requirements to create a competent and trained workforce to manage transformation. The current book available in the market on SAP TM is based on Version 6 release, which does not cover air freight processes. Our book covers end-to-end air freight configuration scenarios for logistic companies.

Guidelines for Chemical Transportation Risk Analysis American Institute of Chemical Engineers, Center for Chemical Process Safety, 1995-04-15 In today's environment, management and citizen concerns make the skilled practice of Transportation Risk Analysis (TRA) imperative. This book offers a sound basic approach to TRA, which can be used to manage and control transportation risks by identifying the parameters with the greatest influence on a given movement or to identify and evaluate risk reduction strategies. Together with Guidelines for Chemical Process Quantitative Risk Analysis (CCPS 1989), it will enable the process engineer to run basic analyses and to effectively manage those which are more complex.
