Prentice Hall Science Explorer: Chemical Interactions Pearson/Prentice Hall, Michael J. Padilla, 2004-10 Mercury Contaminated Sites Ralf Ebinghaus, Ralph R. Turner, Luiz D. de Lacerda, O. Vasiliev, Wim Salomons, 2013-11-11 Mercury is outstanding among the global environmental pollutants of continuing concern Especially in the last decade of the 20 century environmental scientists legislators politicians and the public have become more aware of mercury pollution in the global environment It has often been suggested that anthropogenic emissions are leading to a general increase in mercury on local regional and global scales Numerous industrial activities including the mining of gold silver and mercury itself have caused mercury contamination of terrestrial and aquatic ecosystems Mercury contaminated sites are abundant worldwide Mercury has been accumulated as an industrial legacy in the rocks soils and sediments at and adjacent to industrial sites and now may pose significant risks to human and ecological health Direct inputs of mercury into the environment by industrial activities have generally decreased significantly in the Western world over the past three decades However sources such as coal combustion and the use of mercury in gold and silver mining continue to be of importance on a global scale The same is true for diffuse sources such as terrestrial landscapes that have been impacted by mercury inputs from the atmosphere in the past Soils and vegetation located close to large atmospheric mercury sources have clearly been sinks while these sources were active in the past In the long run however these soils may have become important diffuse area sources after the original emissions were discontinued Flows and Chemical Reactions Roger Prud'homme, 2013-01-09 The aim of this book is to relate fluid flows to chemical reactions It focuses on the establishment of consistent systems of equations with their boundary conditions and interfaces which allow us to model and deal with complex situations Chapter 1 is devoted to simple fluids i.e. to a single chemical constituent The basic principles of incompressible and compressible fluid mechanics are presented in the most concise and educational manner possible for perfect or dissipative fluids Chapter 2 relates to the flows of fluid mixtures in the presence of chemical reactions Chapter 3 is concerned with interfaces and lines Interfaces have been the subject of numerous publications and books for nearly half a century Lines and curvilinear media are less known Several appendices on mathematical notation thermodynamics and mechanics methods are grouped together in Chapter 4 This summary presentation of the basic equations of simple fluids with exercises and their solutions as well as those of chemically reacting flows and interfaces and lines will be very useful for graduate students engineers teachers and scientific researchers in many domains of science and industry who wish to investigate problems of reactive flows Portions of the text may be used in courses or seminars on fluid mechanics *Theoretical Chemistry Volume 3* Richard Newland Dixon, 1974 This product is not available separately it is only sold as part of a set There are 750 products in the set and these are all sold as one entity A system of surgery, tr. and accompanied with notes and observations by J.F. years of work which began as an attempt to write a second edition of my 1976 book *Frontier Orbitals and Organic Chemical Reactions* I wanted to give a rather more thorough introduction to molecular orbitals while maintaining my focus on the organic chemist who did not want a mathematical account but still wanted to understand organic chemistry at a physical level I m delighted to win this prize and hope a new generation of chemists will benefit from these books Professor Ian Fleming
