A figure of 22 years or even 15 years for any guarantee is very long indeed. Company policy would have to be invoked – there are matters to consider in the determination of guarantees other than the test data provided. These matters could include corrosion, user abuse etc. Such factors are more likely to occur, the longer the operating period. Questions need to be asked such as is there an industry standard for such guarantees, what are competitors offering as guarantees, etc.

A further point to note is that DESIGN B exhibits very peculiar characteristics if the γ value is taken into account. The β value remains at 2 but the γ value is negative at over 50 000 cycles! This implies that there is a probability of failure before entering service. This data looks suspect and further tests should be done to confirm the reliability characteristics of DESIGN B.
