Short-Term Load Forecasting using Machine Learning Methods Sylwia Henselmeyer, 2024-10-08

Maintaining the balance between generation and consumption is at the heart of electricity grid operation A disruption to this balance can lead to grid overloads outages system damage rising electricity costs or wasted electricity For this reason accurate forecasting of load behavior is crucial In this work two classes of ML based algorithms were used for load forecasting the Hidden Markov Models HMMs and the Deep Neural Networks DNNs both of which provide stable and more accurate results than the considered benchmark methods HMMs could be successfully used as a stand alone predictor with a training based on Maximum Likelihood Estimation MLE in combination with a clustering of the training data and an optimized Viterbi algorithm which are the main differences to other HMM related load forecasting approaches in the literature Adaptive online training was developed for DNNs to minimize training times and create forecasting models that can be deployed faster and updated as often as necessary to account for the increasing dynamics in power grids related to the growing share of installed renewables In addition the flexible and powerful encoder decoder architecture was used which helped to minimize the forecast error compared to simpler DNN architectures such as Convolutional Neural Networks CNNs

Wearable Sensor Technology for Monitoring Training Load and Health in the Athletic Population Billy Sperlich, Hans-Christer Holmberg, Kamiar Aminian, 2020-02-13 Several internal and external factors have been identified to estimate and control the psycho biological stress of training in order to optimize training responses and to avoid fatigue overtraining and other undesirable health effects of an athlete An increasing number of lightweight sensor based wearable technologies wearables have entered the sports technology market Non invasive sensor based wearable technologies could transmit physical physiological and biological data to computing platform and may provide through human machine interaction smart watch smartphone tablet bio feedback of various parameters for training load management and health However in theory several wearable technologies may assist to control training load but the assessment of accuracy reliability validity usability and practical relevance of new upcoming technologies for the management of training load is paramount for optimal adaptation and health

Data Protection without Data Protectionism Tobias Naef, 2023-01-13 This open access book offers a new account on the legal conflict between privacy and trade in the digital sphere It develops a fundamental rights theory with a new right to continuous protection of personal

data and explores the room for the application of this new right in trade law Replicable legal analysis and practical solutions show the way to deal with cross border data flows without violating fundamental rights and trade law principles The interplay of privacy and trade became a topic of worldwide attention in the wake of Edward Snowden s revelations concerning US mass surveillance Based on claims brought forward by the activist Maximilian Schrems the ECJ passed down two high profile rulings restricting EU US data flows Personal data is relevant for a wide range of services that are supplied across borders and restrictions on data flows therefore have an impact on the trade with such services After the two rulings by the ECJ it is less clear then ever how privacy protection and trade can be brought together on an international scale Although it was widely understood that the legal dispute over EU US data flows concerns the broad application of EU data protection law it has never been fully explored just how far the EU s requirements for the protection of digital rights go and what this means beyond EU US data flows This book shows how the international effects of EU data protection law are rooted in the EU Charter of Fundamental Rights and that the architecture of EU law demands that the Charter as primary EU law takes precedence over international law The book sets out to solve the problem of how the EU legal data transfer regime must be designed to implement the EU s extraterritorial fundamental rights requirements without violating the principles of the WTO s law on services It also addresses current developments in international trade law the conclusion of comprehensive trade agreements and offers suggestion for the design of data flow clauses that accommodate privacy and trade **Manuals**
