The Battleship Builders: Constructing and Arming British Capital Ships Ian Buxton, Ian Johnston, 2013-05-08. The launch in 1606 of HMS Dreadnought, the world's first all-big-gun battleship, rendered all existing battle fleets obsolete, but at the same time it wiped out the Royal Navy's numerical advantage so expensively maintained for decades. Already locked in the same arms race with Germany, Britain urgently needed to build an entirely new battle fleet of these larger, more complex and more costly vessels. In this she succeeded spectacularly: in little over a decade, fifty such ships were completed, almost exactly double that of what Germany achieved. It was only made possible by the company's vast industrial nexus of shipbuilders, engine manufacturers, armament fleets and specialist armour producers, whose contribution to the Grand Fleet is too often ignored. This heroic achievement and how it was done is the subject of this book. It charts the rise of the large industrial conglomerates that were key to this success, looks at the reaction to fast-moving technical changes and analyses the politics of funding this vast national effort both before and beyond the Great War. It also attempts to assess the true cost and value of the Grand Fleet in terms of the resources consumed. And finally, by way of contrast, it describes the effects of the post-war recession, industrial contraction and the very different responses to rearmament in the run-up to the Second World War.

Aircraft Carriers Norman Polmar, 2006-09-01. *Aircraft Carriers* is the definitive history of world aircraft carrier development and operations. Norman Polmar's revised and updated two-volume classic describes the political and technological factors that influenced aircraft carrier design and construction, meticulously records their operations and explains their impact on modern warfare. Volume I provides a comprehensive analysis of carrier developments and warfare in the first half of the twentieth century and examines the advances that allowed the carrier to replace the battleship as the dominant naval weapons system. Polmar gives particular emphasis to carrier operations from World War I through the Japanese strikes against China in the 1930s to World War II in the Atlantic, Mediterranean, Arctic and Pacific theaters. It begins with French inventor Clément Ader's remarkably prescient 1909 description of an aircraft carrier. The book then explains how Britain led the world in the development of aircraft-carrying ships, soon to be followed by the United States and Japan. While ship-based aircraft operations in World War I had limited impact, they foreshadowed the aircraft carriers built in

the 1920s and 1930s The volume also describes the aircraft operating from those ships as well as the commanders who pioneered carrier aviation Aircraft Carriers has benefited from the technical collaboration of senior carrier experts Captain Eric M Brown and General Minoru Genda as well as noted historians Robert M Langdon and Peter B Mersky Aircraft Carriers is heavily illustrated with more than 400 photographs some never before published and maps Volume II which is forthcoming from Potomac Books in the winter 2006 2007 ISBN 978 1 57488 665 8 will cover the period 1946 to the present *The Bluejackets' Manual* ,1950 **The British Battleship 1906-1946** Norman Friedman,2015-09-30 The British battleship is one of the most intensely studied of all naval topics but it is also among the most popular Norman Friedman is one of the most highly regarded of all naval writers with an avid following for his work Therefore a new book on British battleships by Friedman is a major event and has been eagerly awaited ever since knowledge of the project began to circulate among enthusiasts Friedman has the ability to bring new ideas to even the most over worked subjects based on extensive original research and a talent for explaining technology in the wider context of politics economics and strategy His latest book covers the development of Royal Navy capital ships including battlecruisers from the pre history of the revolutionary Dreadnought of 1906 to the last of the line HMS Vanguard in 1946 Repleat with original insights the story that emerges will enlighten and surprise even the most knowledgeable The attraction of the book is enhanced by sets of specially commissioned plans of the important classes by John Roberts and A D Baker III both renowned experts in their own right plus a colour section featuring the original Admiralty draughts including a spectacular double gatefold For many with an interest in warships this will be the book of the year **Popular Science** ,1945-10 Popular Science gives our readers the information and tools to improve their technology and their world The core belief that Popular Science and our readers share The future is going to be better and science and technology are the driving forces that will help make it better *British Battleships of World War Two* Alan Raven,John Roberts,1976 This lavishly illustrated volume first published in 1976 and back by popular demand presents the full story of the design and construction of every British battleship and battlecruiser class that served in World War II from the Queen Elizabeth class to the Vanguard Noted authors Alan Raven and John Roberts include a comprehensive review of each ship s initial configuration and refits as well as developments in weapons gunnery fire control radar protection and propulsion There are also sections devoted to combat actions involving British battleships and comparisons with battleships of other navies Six hundred photographs and illustrations including sixteen fold out pages complement the authoritative history of the vessels For other books in the battleship series see page 26 **Fighting the Great War at Sea** Norman Friedman,2014-10-22 The overriding image of the First World War is the bloody stalemate of the Western Front but although much of the action did occur on land the overall shape of the war _ even the inevitability of British participation _ arose out of its maritime character It was essentially a struggle about access to worldwide resources most clearly seen in the desperate German attempts to deal with the American industrial threat which ultimately levered the United States into the war and

thus a consequence of British sea control rn This radical new book concentrates on the way in which each side tried to use or deny the sea to the other and in so doing it describes rapid wartime changes not only in ship and weapon technology but also in the way naval warfare was envisaged and fought Combat produced many surprises some like the impact of the mine and torpedo are familiar but this book also brings to light many previously unexplored subjects like creative new tactical practices and improved command and control rn The contrast between expectation and reality had enormous consequences not only for the course of the war but also for the way navies developed afterwards This book melds strategic technical and tactical aspects to reveal the First World War from a fresh perspective but also demonstrates how its perceived lessons dominated the way navies prepared for the Second
