Paige

Yuhn, 1994 This laboratory manual is designed for college algebra or precalculus courses that use DERIVE graphing software Each lab exercise is designed to lead students to mathematical insights by encouraging structured exploration Designed in an easy to use workbook format all explorations are self contained on pages with space for answers and are perforated so they can be torn out and handed in to the instructor The manual also supports NCTM guidelines *Experiencing Mathematics*

James R. Breunlin, Timothy A. Kasper, Michelle Kolet, 2006 Experiencing Mathematics Activities to Engage the High School Student is the result of the collaborative effort of nine Adolescent Young Adult AYA National Board Certified Teachers in mathematics This teacher edition is a compilation of successful activities that prompt high school students to explore conjecture and reflect on their mathematical adventures thus experience mathematics The relevant nature of the activities will motivate students to pursue their investigations with vigor and take the intellectual risk necessary to construct knowledge and improve problem solving competence This edition will educate teachers regarding tenets of cognitive science motivation theory and the NCTM NBCT standards It will dispel the myth that the crowded curriculum does not have room for such activities and in fact will convince teachers that using such activities increases teacher and student motivation and achievement The resources provide detailed instructions for each activity along with student prompts and reflective questions for the teacher A First Course in Scientific Computing Rubin Landau, 2011-10-30 This book offers a new

approach to introductory scientific computing It aims to make students comfortable using computers to do science to provide them with the computational tools and knowledge they need throughout their college careers and into their professional careers and to show how all the pieces can work together Rubin Landau introduces the requisite mathematics and computer science in the course of realistic problems from energy use to the building of skyscrapers to projectile motion with drag He is attentive to how each discipline uses its own language to describe the same concepts and how computations are concrete instances of the abstract Landau covers the basics of computation numerical analysis and programming from a computational science perspective The first part of the printed book uses the problem solving environment Maple as its context with the same material covered on the accompanying CD as both Maple and Mathematica programs the second part uses the compiled language Java with equivalent materials in Fortran90 on the CD and the final part presents an introduction to LaTeX replete with sample files Providing the essentials of computing with practical examples A First Course in Scientific
