spiritual idealism Cognitive Action Theory CAT achieves this unification by recognizing that the observer's existence is the foundational premise underlying all scientific inquiry It develops as an event oriented physical theory in which the first person observer is central By analyzing the methods through which we human observers gain knowledge and create the belief systems within which our experiences are explained we discover a fundamental truth all systems are observers and exhibit some form of internal awareness Events not the objects appearing in them are the fundamental building blocks of reality The book is comprised of three parts the first addresses the paradigm shift from an object to an event oriented world view the second develops the foundations of action physics for an event oriented world view and the third provides examples of how these new ideas can be applied to move our knowledge up the next evolutionary step of human development This book will benefit anyone questioning their role in the universe especially those in interdisciplinary fields of philosophy psychology neuroscience and medicine who seek understanding of quantum theory as the physics of conscious systems that know the world
