Decentralized Spatial Computing Matt Duckham, 2012-07-27 Computing increasingly happens somewhere with that geographic location important to the computational process itself Many new and evolving spatial technologies such as geosensor networks and smartphones embody this trend Conventional approaches to spatial computing are centralized and do not account for the inherently decentralized nature of computing somewhere the limited local knowledge of individual system components and the interaction between those components at different locations On the other hand despite being an established topic in distributed systems decentralized computing is not concerned with geographical constraints to the generation and movement of information In this context of centralized spatial computing and decentralized non spatial computing the key question becomes What makes decentralized spatial computing special In Part I of the book the author covers the foundational concepts structures and design techniques for decentralized computing with spatial and spatiotemporal information In Part II he applies those concepts and techniques to the development of algorithms for decentralized spatial computing stepping through a suite of increasingly sophisticated algorithms from algorithms with minimal spatial information about their neighborhoods to algorithms with access to more detailed spatial information such as direction distance or coordinate location to truly spatiotemporal algorithms that monitor environments that are dynamic even using networks that are mobile or volatile Finally in Part III the author shows how decentralized spatial and spatiotemporal algorithms designed using the techniques explored in Part II can be simulated and tested In particular he investigates empirically the important properties of a decentralized spatial algorithm its computational efficiency and its robustness to unavoidable uncertainty Part III concludes with a survey of the opportunities for connecting decentralized spatial computing to ongoing research and emerging hot topics in related fields such as biologically inspired computing geovisualization and stream computing The book is written for students and researchers of computer science and geographic information science Throughout the book the author's style is characterized by a focus on the broader message explaining the process of decentralized spatial algorithm design rather than the technical details Each chapter ends with review questions designed to test the reader's understanding of the material and to point to further work or research The book includes short appendices on discrete mathematics and SQL Simulation models written in NetLogo and associated source code for all the algorithms presented in the book can be found on the author's accompanying website *Catalog of Copyright Entries. Semantics in Adaptive and Personalized Services Manolis Wallace, Ioannis E. Anagnostopoulos, Phivos Mylonas, Mária Bielíková, 2010-03-10 *Semantics in Adaptive and Personalised Services* initially strikes one as a specific and perhaps narrow domain Yet a closer examination of the term reveals much more On one hand there is the issue of semantics Nowadays this most often refers to the use of OWL RDF or some other XML based ontology description language in order to represent the entities of problem Still semantics may also very well refer to the consideration of the meanings and concepts rather than arithmetic measures regardless of the representation used On the other hand there is the issue of adaptation i.e. automated re configuration based on some context This could be the network and device context the application context or the user context we refer to the latter case as

personalization From a different perspective there is the issue of the point of view from which to examine the topic There is the point of view of tools referring to the algorithms and software tools one can use the point of view of the methods referring to the abstract methodologies and best practices one can follow as well as the point of view of applications referring to successful and pioneering case studies that lead the way in research and innovation Or at least so we thought Based on the above reasoning the editors identified key researchers and practitioners in each of the aforementioned categories and invited them to contribute a corresponding work to this book However as the authors contributions started to arrive the editors also started to realize that although these categories participate in each chapter to different degrees none of them can ever be totally obsolete from them Moreover it seems that theory and methods are inherent in the development of tools and applications and inversely the application is also inherent in the motivation and presentation of tools and methods *New*

Managing Business and Service Networks Lundy Lewis, 2005-12-07 Most everything in our experience requires management in some form or other our gardens our automobiles our minds our bodies our love lives our businesses our

forests our countries etc Sometimes we don't call it management per se We seldom talk about managing our minds or automobiles But if we think of management in terms of monitoring maintaining and cultivating with respect to some goal then it makes sense We certainly monitor an automobile albeit unconsciously to make sure that it doesn't exhibit signs of trouble And we certainly try to cultivate our minds This book is about managing networks That itself is not a new concept We've been managing the networks that support our telephones for about 100 years and we've been managing the networks that support our computers for about 20 years What is new and what motivated me to write this book is the following i the enormous advancements in networking technology as we transition from the 20 century to the 21 century ii the increasing dependence of human activities on networking technology and iii the commercialization of services that depend on networking technology e.g. email and electronic commerce
