Askins, Robert Askins, 2014-03-25 Deciduous forests have been remarkably resilient throughout their history recovering from major shifts in climate and surviving periods of massive deforestation But today the world's great forests confront more ominous threats than ever before This visionary book is the first to examine forests consisting of oaks maples hickories beeches chestnuts birches and ecologically similar animals and plants on three continents East Asia Europe and North America to reveal their common origin back in time the ecological patterns they share and the approaches to conservation that have been attempted on their behalf Although these forests face common problems threats due to human activities vary Different land use and agricultural practices on the three continents as well as different attitudes about what is worth preserving have led to strikingly different approaches to forest conservation Robert Askins explores the strengths and weaknesses of conservation efforts across the continents and concludes that the ideal strategy for the future will blend the best ideas from each **Ringed & Migration**, 1989 *Ardea*, 1989 **Interspecific Competition in Birds** André

Cuckoos, Cowbirds and Other Cheats Nick Davies,2010-09-30 This fascinating study describes the natural histories of these brood parasites and examines many of the exciting questions they raise about the evolution of cheating and the arms race between parasites and their prey Brood parasites fill their armoury with adaptations including exquisite egg mimicry rapid laying ejection of host eggs murder of host young chick mimicry and manipulative begging behaviour ploys shown by recent research to have evolved in response to host defence behaviour or through competition among the parasites themselves While many host species appear defenceless accepting parasite eggs quite unlike their own many are more discriminating against odd looking eggs and some have evolved the ability to discriminate against odd looking chicks as well How is this arms race conducted Will defenceless hosts develop defences in time or are there constraints which limit the evolution and perfection of host defences And why are so few species obliged only to lay eggs in host nests Have host defences limited the success of brood parasitism or is it in fact much more common than we suspect but occurring mainly when birds parasitize the nest of their own kind All of these puzzles are examined in descriptions of the natural history of each of the groups of parasites in turn Here is a book with wide appeal both to amateur naturalists fascinated by this most singular and macabre of behaviours and by ornithologists and ecologists interested in the evolution of ecology and behaviour The story takes us from the classic field work by pioneer ornithologists such as Edgar Chance Stuart Baker Herbert Friedmann and others through to the experimental field work and molecular techniques of today s leading scientists We visit brood parasites in Europe Asia Japan Africa Australasia and North and South America to look at some of the world s most

one remove from the controlled contours of metropolitan nature is not the poor relation of rural flora and fauna. Indeed, these islands of biodiversity underline the porosity of the distinction between urban and rural. In *Natura Urbana*, Matthew Gandy explores urban nature as a multilayered material and symbolic entity through the lens of urban ecology and the parallel study of diverse cultures of nature at a global scale. Gandy examines the articulation of alternative and, in some cases, counterhegemonic sources of knowledge about urban nature produced by artists, writers, scientists, as well as curious citizens including voices seldom heard in environmental discourse. The book is driven by Gandy's fascination with spontaneous forms of urban nature ranging from postindustrial wastelands brimming with life to the return of such predators as wolves and leopards on the urban fringe. Gandy develops a critical synthesis between different strands of urban ecology and considers whether urban political ecology broadly defined might be imaginatively extended to take fuller account of both the historiography of the ecological sciences and recent insights derived from feminist, posthuman, and postcolonial thought.
