Fission-Track Thermochronology and its Application to Geology Marco G. Malusà, Paul G. Fitzgerald, 2018-07-14

This book is focused on the basics of applying thermochronology to geological and tectonic problems with the emphasis on fission track thermochronology. It is conceived for relatively new practitioners to thermochronology as well as scientists experienced in the various methods. The book is structured in two parts. Part I is devoted to the fundamentals of the fission track method to its integration with other geochronologic methods and to the basic principles of statistics for fission track dating and sedimentology applied to detrital thermochronology. Part I also includes the historical development of the technique and thoughts on future directions. Part II is devoted to the geological interpretation of the thermochronologic record. The thermal frame of reference and the different approaches for the interpretation of fission track data within a geological framework of both basement and detrital studies are discussed in detail. Separate chapters demonstrate the application of fission track thermochronology from various perspectives e.g. tectonics, petrology, stratigraphy, hydrocarbon exploration, geomorphology, with other chapters on the application to basement rocks in orogens, passive continental margins, and cratonic interiors, as well as various applications of detrital thermochronology.

Proteomic Single-synapse Analysis with Array Tomography Brad Lee Busse, 2011. Array tomography (AT) is a high resolution proteomic imaging method that exploits a combination of light and EM techniques to resolve fine details at the synapse level across large fields of view spanning entire circuits. Much of my graduate work has centered on helping to shape AT into an imaging method fit for rigorous use by developing computational algorithms which take advantage of AT's particular qualities to automate its operation. Among them are a mapping tool for microscopy software to automate the imaging of AT's unique section layout, Multistackreg, an alignment plugin which is capable of registering multiple imaging sessions on the same piece of tissue, a cross correlation algorithm for fluorescent channel validation, the synaptogram, a tool for visualizing synapse scale high dimensional proteomic molecular complexes, and an active learning paradigm for large scale synapse quantification.

Advances in Diagnosis and Therapeutic Intervention for Foodborne Parasitic Diseases, Volume II Wei Cong, Shuai Wang, Ehsan Ahmadvpour, Xiao-Xuan Zhang, Nian-Zhang Zhang, Guo-Hua Liu, 2022-06-16. *Manual of Intracytoplasmic Sperm Injection in Human Assisted Reproduction* Gianpiero D. Palermo, Zolt Peter Nagy, 2021-11-25. Not everything in medical science has a clear beginning. The first realization of infertility and putative remedies remain shrouded in contextual history but likely goes back to the dawn of our species well before there was a written record. Childlessness was and is still considered a burden in some communities. Microbial Connections Between the Subsurface Sulfur Cycle and Other Elemental Cycles Alexandra V. Turchyn, Orit Sivan, Shuhei Ono, Tanja Bosak, 2018-11-16. Sulfur has many redox states and is a major metabolite in suboxic and anaerobic environments including but not restricted to marine and marginal marine sediments, the water column of oxygen minimum zones, salt marshes, and oil wells. Microbially mediated redox cycling of sulfur

typically comprises dissimilatory sulfate reduction MSR sulfide reoxidation disproportionation and the oxidation and reduction of sulfur redox intermediates These processes contribute to the degradation of organic matter link the cycles of sulfur and carbon control the production and consumption of methane and are critical for the long term budget of O₂ in the atmosphere Microbial and abiotic processes at redox interfaces also connect the sulfur cycle to the redox cycles of nitrogen iron and other elements producing distinctive geochemical and molecular signatures Studies that couple microbiology with stable isotope geochemistry have informed interpretations of microbial sulfur cycling in modern and past environments Laboratory based studies and models of MSR have sought to understand the physiological and environmental controls of the magnitude of sulfur isotope fractionation The fractionations of stable sulfur and oxygen isotopes during MSR are also used to track enzymatic activity during MSR and processes that oxidize sulfide in the presence of environmental oxidants Outstanding questions in the field concern the importance of oxidative processes within the natural environment the delivery of oxidants and carbon sources to the zones of sulfate reduction and the ability to detect or reconstruct oxidative processes from the chemical isotopic metagenomic transcriptomic proteomic and metabolomics profiles in the environment Recent studies have emphasized the complex connections between sulfur and methane iron nitrogen and other elements These links may involve the redox cycling of species that occur at concentrations difficult to detect by standard geochemical techniques or that are cycled at very rapid rates cryptic cycles Of particular interest is the use of isotope geochemistry to quantify links among various electron acceptors including sulfate ferric iron and nitrate during the anaerobic methane oxidation For example recent geochemical measurements have hinted that microbial sulfate reduction coupled to organic matter oxidation is mechanistically different to when sulfate reduction is coupled to methane oxidation Recent studies have also suggested a possible contribution of a number of previously uncultured microbial groups in sulfur cycling in sulfidic environments inspiring further studies of these organisms and their partnerships in anaerobic environments This Research Topic highlights studies of microbial interactions processes and communities that couple the sulfur cycle to the cycles of other elements in aphotic environments

Marine Microbiomes: Towards Standard Methods and Best Practices Stéphane Pesant, Kelly D. Goodwin, Catarina Magalhães, Anaïs Lacoursière-Roussel, 2023-12-14 A decade of technological advances and

research on the human microbiome has re defined our understanding of biological systems and now offers diagnostic tools and new approaches to human health Likewise marine ecosystems are driven by their microbiome the ensemble of microscopic organisms that inhabit the water column sediments and aquatic organisms and regulate most fluxes of energy and matter While the human microbiome is composed principally of bacteria the marine microbiome has a much broader ensemble of microscopic organisms with sizes spanning from viruses of a few tens of nanometres to metazoans of several centimetres Advances in high throughput imaging and sequencing are emerging in aquatic science providing important insights into ecosystem structure and functions and contributing to develop new indicators of ecosystem health and potential hazards to living resources and humans A number of research exploration and monitoring programs such as the Tara Oceans global expedition and the Marine Biological Observing Network MBON and the rising popularity of environmental DNA eDNA already led to a wealth of data However the wide range of methodologies used in this early exploration phase poses a challenge to integrative studies prompting community responses such as the Genomic Standards Consortium This Research Topic will foster cross community exchange of standards and best practices It is an opportunity for the different communities working on marine microbiomes to discuss the advantages and the limitations of their sampling and analysis methods The collection of papers will constitute a knowledge base aimed at 1 addressing the integration of existing observations from heterogenous methods and data types and 2 working towards cross communities standards and best practices for future observations and experiments This Research Topic will publish comprehensive methodological papers that review a sufficiently large body of field or experimental work Supporting meta data such as environmental context sampling materials sample treatments extraction and imaging yields must be provided and should preferably be uploaded to an online sample registry such as BioSamples Protocols and analytical methods should preferably be uploaded to an online repository such as Protocols io We welcome contributions from communities working in different environments focus on marine systems but also interested in estuarine and freshwater systems coastal open ocean and deep sea regions benthic pelagic and aerosol environments We strongly encourage contributions from communities involved in networks of local observatories and long term monitoring programs regional basin scale surveys and global expeditions biodiscovery linked to economic sectors such as pharmaceuticals and bioengineering environmental and health assessments linked to economic sectors such as aquaculture fisheries seabed mining wind farms and oil and gas

Artificial Intelligence and Algorithms in Intelligent Systems Radek Silhavy, 2018-05-26 This book presents the latest trends and approaches in artificial intelligence research and its application to intelligent systems It discusses hybridization of algorithms new trends in neural networks optimisation algorithms and real life issues related to the application of artificial methods The book constitutes the second volume of the refereed proceedings of the Artificial Intelligence and Algorithms in Intelligent Systems of the 7th Computer Science On line Conference 2018 CSOC 2018 held online in April 2018 Pattern Recognition and Image Analysis Aythami Morales, Julian Fierrez, José Salvador Sánchez, Bernardete Ribeiro, 2019-09-21 This 2 volume set constitutes the refereed proceedings of the 9th Iberian Conference on Pattern Recognition and Image Analysis IbPRIA 2019 held in Madrid Spain in July 2019 The 99 papers in these volumes were carefully reviewed and selected from 137 submissions They are organized in topical sections named Part I best ranked papers machine learning pattern recognition image processing and representation Part II biometrics handwriting and document analysis other applications Biotrophic Plant-Microbe Interactions Pietro D. Spanu, Ralph Panstruga, 2017-04-20 Throughout their life plants interact with all sorts of microbes Some of these are detrimental and cause disease some interactions are mutually beneficial for both partners It is clear that most if not all of the interactions are regulated by highly complex checks and balances sustained by signalling and exchange of messengers and nutrients The interactions where both partners are alive for a significant part of their time together are called biotrophic In this e book we bring together 33 articles representing the current state of the art in research about diverse biotrophic plant microbe associations aimed at describing and understanding how these complex and ubiquitous partnerships work and ultimately support much of the land based biosphere Chromatin, Epigenetics and Plant Physiology Jiří Fajkus, Miloslava Fojtová, 2021-01-20 This eBook focuses on current progress in understanding the role of chromatin structure its modifications and remodeling in developmental and physiological processes Eukaryotic genomes are packed into the supramolecular nucleoprotein structure of chromatin Therefore our understanding of processes such as DNA replication and repair transcription and cell differentiation requires an understanding of the structure and function of chromatin While the nucleotide sequence of the DNA component of chromatin constitutes the genetic material of the cell the other chromatin components and also modifications of bases in the DNA itself participate in so called epigenetic processes These processes are essential e g in ontogenesis or adaptation to environmental changes Therefore epigenetics is particularly important and elaborated in plants

that show a high developmental plasticity and as sessile organisms display an enormous capacity to cope with environmental stress In these processes epigenetic mechanisms show a crosstalk with plant signaling pathways mediated by phytohormones and redox components You are welcome to read examples of current research and review articles in this hot research topic
