1. The product of the reaction above is called a "dipeptide".
 - a. Which two functional groups are involved in this reaction? Circle and label these two groups on the reactants. **Carboxyl and amino group**
 - b. Circle and label the new **peptide bond** formed between the two amino acids.
 - c. Does a peptide bond involve the amino acid "**backbone**" or **R-groups**? (Circle one.)
 - d. Draw a square around each **amino acid** in the dipeptide. An amino acid that is part of a polypeptide chain is referred to as a "**residue**."
 - e. Label the "**N-terminus**" and the "**C-terminus**" (also known as the amino- and carboxy-termini) of the dipeptide molecule. ("terminus"="end")
2. The addition (**polymerization**) of amino acid **monomers** is directional, with new amino acids added only onto the C-terminus of the growing polypeptide chain.

- a. Draw a **tripeptide** by redrawing the dipeptide from the image above and include the third amino acid shown to the right.
- b. Circle the **peptide bonds** and label the "**N-terminus**" and the "**C-terminus**" of your tripeptide.
- c. Assign each term: **charged**, **nonpolar**, and **polar** to the correct R-group in your tripeptide.
- d. Two of your R-groups are **hydrophilic** and can form **hydrogen bonds** with water. Draw two H₂O molecules interacting with your tripeptide, using dotted lines to represent the hydrogen bonds. Label the partial charges of the atoms involved in each hydrogen bond you draw.

Zaidi, 2012-12-06 Although many pursue understanding of the relationship between protein structure and function for the thrill of pure science the pay off in a much broader sense is the ability to manipulate the Earth's chemistry and biology to improve the quality of life for mankind Immediately goals of this area of research include identification of the life supporting functions of proteins and the fundamental forces that facilitate these functions Upon reaching these goals we shall have the understanding to direct and the tools required to implement changes that will dramatically improve the quality of life For example understanding the chemical mechanism of diseases will facilitate development of new therapeutic drugs Likewise understanding of chemical mechanisms of plant growth will be used with biotechnology to improve food production under adverse climatic conditions The challenge to understand details of protein structure function relationships is enormous and requires an international effort for success To direct the chemistry and biology of our environment in a positive sense will require efforts from bright imaginative scientists located throughout the world Although the emergence of FAX e mail and the World Wide Web has revolutionized international communication there remains a need for scientists located in distant parts of the world to occasionally meet face to face **Introduction to Protein Structure** Carl Ivar Branden, John
