

TRANSPORT IN CELLS

How do water molecules move?

Why?

Water accounts for over 70% of the human body. If water levels are not regulated and maintained there can be disastrous consequences. Cells and tissues can swell, blood cells burst and your brain expands so much it pushes on the skull, leading to brain damage and death. So what exactly is the process that allows organisms to regulate and maintain their water content?

MODEL 1: Movement of Water – a type of diffusion.

Schematic Diagram of Transport of Water in a Sugar Solution:

Key:

Sugar molecules (solute)

Water molecules (solvent)

Selectively permeable membrane

For each question use the above diagram:

1. Complete the following table:

	Left side of membrane	Right side of membrane
Number of water molecules	24	14
Number of sugar molecules	6	15
Ratio of water to sugar	4:1	14:15

2.
 - a. What is the **solvent** in the diagram?
Water molecules
 - b. What is the **solute** in the diagram?
Sugar molecules
3. Using the terms from Question 2, define a solution (use complete sentences).

Solution is the product of the solute and the solvents

Intracellular Transport Katherine Brehme Warren, 2014-05-12 Intracellular Transport is a collection of papers that examines the processes of and the mechanisms underlying intracellular transport One paper describes that all active transport processes in the amoeba are intracellular and depend on dynamic transformations of membrane into cytoplasm and of cytoplasm into membrane Another paper discusses the kinetics of membrane transport of which the phenomena of counterflow can become a mobile carrier system The paper notes that the specific transport properties of membranes are conferred by the proteins of the surfaces that are grouped as macromolecular complexes probably similar to those of enzymes One paper describes the concept of parametric pumping an oscillation driven separation process as a possible model for active transport in biological cells Another paper compares the fine scale diffusion effects that happen in a mixture without large scale concentration gradients and where the effect are on a large scale The homogenous kinetic law can be used in the large scale situation the law already can account for any of the fine scale diffusion effects The paper notes that without large scale concentration gradients the transport event is from a local region to a nearby reaction site only Where the effects are on a large scale the diffusion results in a gross transport of over distances larger than molecular dimensions This collection can prove useful for mathematicians cellular biologists physical chemists physiologists electron microscopists geneticists and engineers *Transport Phenomena in Biological Systems* George A.
