Meaningful Economics Bart J. Wilson, 2024 Economics has a problem the discipline cannot distinguish the causes of human action from the consequences of human action Economists deal with matters of fact not with feelings and morals They model representations of optimal agents not flesh and blood human beings in ordinary life By assuming that incentives and self

interest are sufficient to explain economic activity economic science proceeds as if the human mind does not matter But the origins of our actions ideas do indeed matter They make us human In *Meaningful Economics* Bart J Wilson challenges economics to directly engage human beings as we really are not as economists ideally assume Wilson argues that economic science is as much about purposes and human values as it is about incentives Moreover he shows how the outcomes of our decisions costs and benefits and the origins of our decisions motives and goals can be understood in an integrated way Over the course of the book Wilson develops a framework that connects the origins of human action to the outcomes of human action explaining human conduct with causes and effects He then shows how three basic principles of economics trade specialization and property require meaning values and purpose With a fresh perspective and a novel theoretical framework that bridges economics and ethics *Meaningful Economics* explains the roots of human conduct and its economic effects by grounding a science of economics in the moral sentiments that prompt human beings to act [Catalog of Copyright Entries, Third Series](#) Library of Congress. 10 Murray Rothbard, 1997 **Consumer Credit and the American Economy** Thomas A. Durkin, Gregory E. Elliehausen, 2014 Consumer Credit and the American Economy examines the economics behavioral science sociology history institutions law and regulation of consumer credit in the United States After discussing the origins and various kinds of consumer credit available in today s marketplace this book reviews at some length the long run growth of consumer credit to explore the widely held belief that somehow consumer credit has risen too fast for too long It then turns to demand and supply with chapters discussing neoclassical theories of demand new behavioral economics and evidence on production costs and why consumer credit might seem expensive compared to some other kinds of credit like government finance This discussion includes review of the economics of risk management and funding sources as well discussion of the economic theory of why some people might be limited in their credit search the phenomenon of credit rationing This examination includes review of issues of risk management through mathematical methods of borrower screening known as credit scoring and financial market sources of funding for offerings of consumer credit The book then discusses technological change in credit granting It examines how modern automated information systems called credit reporting agencies or more popularly credit bureaus reduce the costs of information acquisition and permit greater credit availability at less cost This discussion is followed by examination of the logical offspring of technology the ubiquitous credit card that permits consumers access to both payments and credit services worldwide virtually instantly After a chapter on institutions that have arisen to supply

credit to individuals for whom mainstream credit is often unavailable including payday loans and other small dollar sources of loans discussion turns to legal structure and the regulation of consumer credit There are separate chapters on the theories behind the two main thrusts of federal regulation to this point fairness for all and financial disclosure Following these chapters there is another on state regulation that has long focused on marketplace access and pricing Before a final concluding chapter another chapter focuses on two noncredit marketplace products that are closely related to credit The first of them debt protection including credit insurance and other forms of credit protection is economically a complement The second product consumer leasing is a substitute for credit use in many situations especially involving acquisition of automobiles This chapter is followed by a full review of consumer bankruptcy what happens in the worst of cases when consumers find themselves unable to repay their loans Because of the importance of consumer credit in consumers financial affairs the intended audience includes anyone interested in these issues not only specialists who spend much of their time focused on them For this reason the authors have carefully avoided academic jargon and the mathematics that is the modern language of economics It also examines the psychological sociological historical and especially legal traditions that go into fully understanding what has led to the demand for consumer credit and to what the markets and institutions that provide these products have become today
