It contains 13 exercises that are part of the course LIST OF EXPERIMENTS 1 Tension test on a mild steel rod 2 Double shear test on Mild steel and Aluminium rods 3 Torsion test on mild steel rod 4 Impact test on metal specimen 5 Hardness test on metals Brinnell and Rockwell Hardness Number 6 Deflection test on beams 7 Compression test on helical springs 8 Strain Measurement using Rosette strain gauge 9 Effect of hardening Improvement in hardness and impact resistance of steels 10 Tempering Improvement Mechanical properties Comparison i Unhardened specimen ii Quenched Specimen and iii Quenched and tempered specimen 11 Microscopic Examination of i Hardened samples and ii Hardened and tempered samples **A Laboratory Manual of Metals and Alloys** S. M. Ashraf, 2008-12-08 This compendium of twenty laboratory experiments on metals and alloys attempts to provide to students of Science and Engineering an insight about the relationship of the physical specially mechanical properties of metals with grain structures microstructures. In almost all the experiments therefore the microstructural investigation is provided. Experiments have also been included on the determination of important mechanical and thermal properties and on the aqueous and atmospheric corrosion of metals. Theoretical background of each experiment has been dealt with in good detail in order to enable the student to understand the underlying principles and to appreciate the significance of the experiments. Information which could not be accommodated given in the text of the experiments has been provided in the form of appendices. These include reflection microscopy experimental determination of transition points through cooling curves to get data for plotting phase diagrams and quenching media for tempering of alloys. In view of the importance of microstructures for some metals and alloys have also been given *Engineering Practical Book Vol-II* Farrukh Hafeez, Mohd Arif, 2017-03-30 The importance of practical training in engineering education as emphasized by the AICTE has motivated the authors to compile the work of various engineering laboratories into a systematic text and practical laboratory book. The manual is written in a simple language and lucid style. It is hoped that students will understand the manual without any difficulty and perform the experiments. The first part of the book has been designed to cover the mechanics and testing of Materials as per ASTM standards. It incorporates basics of mechanics required to handle the latest testing equipment's for testing of Materials. Later half of the book covers the basic science and properties of materials along with the micro analysis of the materials. Brief theory and basic fundamentals have been incorporated to understand the experiments and for the preparation of lab report independently. Sample calculations have been provided to help the students in tabulating the experimental and theoretical results comparing and interpreting them within technical frame. The book also covers the general aspects for the preparation of a technical report and precautions to be taken in the laboratories for accurate and save performance of experiments. In end of each experiment questions related to each experiment have been provided to test

the depth of knowledge gained by the students The manual has been prepared as per the general requirements of strength of material laboratory and Material science text laboratories for any graduate and Diploma level class syllabus Material mechanics testing and their analysis is an important engineering aspect and its knowledge is applied in almost all industries We hope that manual would be useful for establishing a new laboratory and for the students of all branches Any suggestions for further improvement of the manual will be welcome and incorporated in the next edition
