Mapping the Spectrum Klaus Hentschel, 2002 Ever since the boom of spectrum analysis in the 1860s spectroscopy has become one of the

most fruitful research technologies in analytic chemistry physics astronomy and other sciences This book is the first in depth study of the ways in which various types of spectra especially the sun s Fraunhofer lines have been recorded displayed and interpreted The book assesses the virtues and pitfalls of various types of depictions including hand sketches woodcuts engravings lithographs and from the late 1870s onwards photomechanical reproductions The material of a 19th century engraver or lithographer the daily research practice of a spectroscopist in the laboratory or a student s use of spectrum posters in the classroom all are looked at and documented here For pioneers of photography such as John Herschel or Hermann Wilhelm Vogel the spectrum even served as a prime test object for gauging the color sensitivity of their processes This is a broad contextual portrayal of the visual culture of spectroscopy in the 19th and early 20th centuries The illustrations are not confined to spectra they show instruments laboratories people at work and plates of printing manuals The result is a multifaceted description focusing on the period from Fraunhofer up to the beginning of Bohr s quantum theory A great deal of new and fascinating material from two dozen archives has been included A must for anyone interested in the history of modern science or in research practice using visual representations

Active Assessment: Assessing Scientific Inquiry David I. Hanauer, Graham F. Hatfull, Debbie Jacobs-Sera, 2009-04-21 The term scientific inquiry as manifest in different educational settings covers a wide range of diverse activities The differences in types of scientific inquiry can be organized along a continuum according to the degree of teacher control and intellectual sophistication involved in each type of inquiry Types of scientific inquiry can also be defined according to whether they produce cultural knowledge or personal knowledge Authentic scientific inquiry is defined according to the development of personal and cultural knowledge contextualized scientific knowledge the progression toward high order problem solving social interaction for scientific goals and scientific inquiry as a multi stage and multi representational process The definition of scientific inquiry that forms the basis for the development of an assessment program consists of a two part analytical frame the definition of knowledge types relevant to scientific inquiry and the definition of an organizational frame for these knowledge types Four types of knowledge are significant for the definition of a specific scientific inquiry program cognitive knowledge physical knowledge representational knowledge and presentational knowledge All four of these knowledge types are considered significant

cant These four types of knowledge are organized in a framework that consists of two intersecting axes the axis of knowledge types and the axis of stages of a s ci c scienti c inquiry This framework describes scienti c inquiry as multi stage process that involves the development of a series of in lab outcomes represen tions over an extended period of time
