simulation. The program **simulates** the situation where all of the students come to the office at the same time and receive the same advice from the advisor. This is not the way that the students actually behave, but it is a way to simulate the situation. The program then prints out the results of the simulation. The results show that the students who come to the office at the same time and receive the same advice from the advisor are more likely to be successful than the students who come to the office at different times and receive different advice from the advisor.

In order to see how the program works, you can run the program on your own computer. The program is written in C++ and is available for download from the internet. The program is a simple program that you can run on your own computer. The program is a good example of how to use simulation to solve a problem. The program is a good example of how to use simulation to solve a problem.
