Modelling, Robustness and Sensitivity Reduction in Control Systems Ruth F. Curtain, 2013-06-29 Historically one of the basic issues in control systems design has been robustness the ability of a controlled plant to withstand variations in or lack of knowledge of its dynamics Even if the dynamics of a system are accurately known for purposes of implementation it is often desirable to design a control system based on a simplified model Consequently it is essential to be able to guarantee a reasonable performance not only for the nominal plant but also for its neighbouring perturbations this is the issue of robustness Since the beginning of this decade major advances have been made in this area notably using the H approach this term is meant to cover the solution of sensitivity reduction approximation and model reduction robustness and related control design problems using the mathematics of Hardy spaces and related areas in Harmonic Analysis This book contains the proceedings of the NATO Advanced Research Workshop on Modelling Robustness and Sensitivity Reduction in Control Systems which was held at the University of Groningen December 1986 Its aim was to explore the development of H design techniques and its ramifications in Systems Theory in a unified and systematic way with the emphasis on recent advances and future directions in this fast developing area In particular the following inter related aspects were addressed H mathematical foundations model approximation and robustness in control design optimal sensitivity reduction modelling and system identification and signal processing

Essays in Panel Data Econometrics Marc Nerlove, 2005-11-10 This volume collects seven of Marc Nerlove's previously published classic essays on panel data econometrics written over the past thirty five years together with a cogent essay on the history of the subject which began with George Biddell Airey's monograph published in 1861 Since Professor Nerlove's 1966 *Econometrica* paper with Pietro Balestra panel data and methods of econometric analysis appropriate to such data have become increasingly important in the discipline The principal factors in the research environment affecting the future course of panel data econometrics are the phenomenal growth in the computational power available to the individual researcher at his or her desktop and the ready availability of data sets both large and small via the Internet The best way to formulate statistical models for inference is motivated and shaped by substantive problems and understanding of the processes generating the data at hand to resolve them The essays illustrate

both the role of the substantive context in shaping appropriate methods of inference and the increasing importance of computer intensive methods The Handbook of Forecasting Spyros G.
