Earthquake Resistant Engineering Structures VI C. A. Brebbia, 2007 The problem of protecting the built environment in earthquake prone regions of the world involves not only the optimal design and construction of new facilities but also the upgrading and rehabilitation of existing structures and infrastructures The latter is a laborious and expensive task which can be accomplished only gradually However the inestimable loss of life and the colossal costs following a major earthquake in a metropolitan area provide sufficient reason to make it an important challenge for the scientific and technical community Containing papers presented at the Sixth International Conference on

Earthquake Resistance and Engineering Structures this book will be invaluable to engineers scientists and managers working in industry academia research organizations and governments The book encompasses a wide range of topics such as Site Effects and Geotechnical aspects Earthquake resistant design Seismic Behaviour and Vulnerability Structural Dynamics Monitoring and Testing Bridges Heritage Buildings Masonry Construction Retrofitting Passive Protection Devices and Seismic Isolation Lifelines Design Codes and Response Spectre

The Behaviour and Design of Steel Structures to EC3, Fourth Edition N.S. Trahair, M.A. Bradford, David Nethercot, Leroy Gardner, 2007-11-21 The fully revised fourth edition of this successful textbook fills a void which will arise when British designers start using the European steel code EC3 instead of the current steel code BS5950 The principal feature of the forth edition is the discussion of the behaviour of steel structures and the criteria used in design according to the British version of EC3 Thus it serves to bridge the gap which too often occurs when attention is concentrated on methods of analysis and the sizing of structural components Because emphasis is placed on the development of an understanding of behaviour many analytical details are either omitted in favour of more descriptive explanations or are relegated to appendices The many worked examples both illustrate the behaviour of steel structures and exemplify details of the design process The Behaviour and Design of Steel Structures to EC3 is a key text for senior undergraduate and graduate students and an essential reference tool for practising structural engineers in the UK and other countries
