What is matter?	Anything that has mass and takes up space
Mass is.....	The amount of matter in an object. Measured in grams, kilograms
Volume is.....	The amount of space an object takes up. Measured in milliliters and liters
How would you find the volume of an irregular object, such as a rock, using only a graduated cylinder and water? Describe the process.	Read and record the volume of the water. Drop the rock into the water. Read and record the volume of the rock and the water, then subtract the volume of the water from it.
Describe how particles of matter are arranged in a SOLID. Draw a picture showing this arrangement.	Particles are tightly packed together. They can vibrate, but cannot move out of position.
Describe how particles of matter are arranged in a LIQUID. Draw a picture showing this arrangement.	Particles are further apart, and can flow past one another.
Describe how particles of matter are arranged in a GAS. Draw a picture showing this arrangement.	Particles are much farther apart, rarely coming in contact with one another.
What is density? Use this definition to explain why some object can float and some sink. (textbook p 163)	The amount of mass per unit of volume. If an object is denser than the fluid it is in, it will sink. If it is less dense, it will float.
