

Evolution D.A. Study Guide

Test Date: _____

Use this worksheet as a guideline to help you study for the upcoming Evolution District Assessment. Answers can be found in your textbook, journal entries, directed readings, and notes we have done during this unit.

Part 1: Evolution and Geologic Time

1. What is an adaptation? List some examples of animals and the adaptations that help them survive.
A characteristic that improves an individual's ability to survive and reproduce in a particular environment
Examples- Long neck, striped fur
2. Define evolution.
The process in which inherited characteristics within a population change over generations such that new species sometimes arise.
3. How can one population branch off into two different species over time?
Through the three steps of speciation- 1. Isolation (separation) 2. Adaptation (through Natural Selection) 3. Divergence
4. What is a fossil? How do fossils form? Why is the fossil record so incomplete?
The remains or physical evidence of an organism preserved by geological processes.
They are formed when a dead organism is covered by layer of sediment. Over time, more sediment settles on top of the organism. Minerals in the sediment may seep into the organism and gradually replace the organism with stone. If the organism rots away completely after being covered, it may leave an imprint of itself in the rock.
The organism has to be "lucky." The right conditions have to be met and then if it becomes a fossil, it must be discovered.
5. What is a homology? Give some examples.
The similarity of the body parts in animals that share a common ancestor (they have inherited the same traits).
Example- Forelimbs of mammals/vertebrates
6. What is an analogy? Give some examples.
Similar characteristics that evolved independently in different species (NOT inherited from the same common ancestor).
Convergent evolution- When two unrelated species converge on the same adaptation for a similar function.
7. What is a vestigial structure? Give some examples.
A body part that no longer serves any function.
Human - Appendix, tailbone, wisdom teeth, goose bumps, ear muscles; Animal - pelvic bone in whales and snakes
8. How does the fossil record provide evidence for evolution?
Provides evidence about the order in which species have existed. Scientists observe that all living organisms have characteristics in common and inherit characteristics in similar ways. Scientists think that all living species descended from common ancestors. Evidence of these ancestors are found in the fossil record.
