The Book on Testing Alex Rodov,2023-03-17 More than ever we depend on software to get through our everyday lives It's embedded in our smartphones cars children's toys and household appliances even our toasters and it's transforming our world This brave new world of technology offers exciting opportunities but it has never been more important that we recognize and understand the risks to our security and safety When software goes bad the consequences can range from the farcical such as the HealthCare.gov fiasco in which a highly touted government website crashed almost immediately upon being launched to the tragic as in the case of the Arizona woman who was killed by a self

driving car that didn't recognize her as a pedestrian. Testing is our line of defence against these software related catastrophes. Yet for years it was seen as an afterthought, a chore that developers only carried out because they had to and which they tried to complete as cheaply and quickly as possible. In *The Book on Testing* Alex Rodov leads the reader on a personal and informal tour of the software testing landscape focusing on what happens when it isn't done properly. In easy to understand language he offers real life examples as well as insights gained from decades of experience to demonstrate why it doesn't have to be that way. Testing is difficult and can never be perfect. But if it's done well we'll all be able to sleep better at night.

Select Your Electric Car Dale Stubbart, An Electric Car is often referred to as an electric vehicle or EV. In *Select Your Electric Car* I explore the various options of EVs available in the United States. If you live in California or in one of the other states which have similar zero emission vehicle standards you will have more choices. These states have laws that car companies selling cars in their state must provide a certain percentage of EVs. I am going to focus on the EVs which are widely available in the US now. In 2018 I'll compare them so that hopefully you will be able to purchase the EV which fits your lifestyle or the lifestyle which you plan to adopt once you own an EV. I'll also look at a few other EVs which are not as widely available. In 2019 car dealers will be offering more models of EVs nationally at least that's the plan. I'm thinking that you might want a car with more of a track record. So I won't be saying as much about those models though I will mention them. The US ranks seventh in number of EVs sold following China, United Kingdom, France, Sweden, Netherlands and Norway who is at 1. If you wanted to wait until 2019 to drive your EV and you had 200,000 to 200K to spare and you had a Commercial Driver's License (CDL) or could hire a driver who did, why not just purchase a Tesla Electric Semi? After all, Elon Musk is now saying it will have a 600 mile range. Even if he's only 75% correct that's still a 450 mile range. I could drive into town Olympia every day of the week and up to the big city Seattle on the weekend. And I still wouldn't have to charge my rig. And in Aug 2018 a Tesla Semi made it from Coast to Coast across the US. It did have to be recharged. But the driver was able to find charging stations which were powerful enough to charge it. But where would I park the thing? Besides I don't have a CDL. And the few people I know who do aren't interested in being my personal chauffeur. I also definitely don't have 200K that I can afford to spend on my next vehicle. I won't talk about the Tesla Semi in this book. You can read about that vehicle in my book *The Hybrid Vehicle*. I'll also mention techniques for

driving an EV which will expand their range At least these techniques work when driving my 2015 Electric Nissan Leaf
