National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Board on Testing and Assessment, Board on Science Education, Heidi Schweingruber, Alexandra Beatty, 2017-04-24 Science educators in the United States are adapting to a new vision of how students learn science Children are natural explorers and their observations and intuitions about the world around them are the foundation for science learning Unfortunately the way science has been taught in the United States has not always taken advantage of those attributes Some students who successfully complete their K 12 science classes have not really had the chance to do science for themselves in ways that harness their natural curiosity and understanding of the world around them The introduction of the Next Generation Science Standards led many states schools and districts to change curricula instruction and professional development to align with the standards Therefore existing assessments whatever their purpose cannot be used to measure the full range of activities and interactions happening in science classrooms that have adapted to these ideas because they were not designed to do so Seeing Students Learn Science is meant to help educators improve their understanding of how students learn science and guide the adaptation of their instruction and approach to assessment It includes examples of innovative assessment formats ways to embed assessments in engaging classroom activities and ideas for interpreting and using novel kinds of assessment information It provides ideas and questions educators can use to reflect on what they can adapt right away and what they can work toward more gradually
